Theory and Practice of Model Transformations Richard F. Paige, 2009-06-29 Models have become essential for supporting the development analysis and evolution of large scale and complex IT systems Models allow different views perspectives and elements of a system to be captured rigorously and precisely thus allowing automated tools to manipulate and manage the models In a full edged model driven engineering MDE process the transformations developed and pressed between models are also key Model transformations allow the definition and implementation of the operations on models and also provide a chain that enables the automated development of a system from its corresponding models Model transformations are already an integral part of any model driven approach and there are a number of available model transformation languages tools and supporting environments some of these approaches are now approaching maturity Nevertheless much work remains the research community and industry need to better understand the foundations and implications of model transformations such as the key concepts and operators supporting transformation languages their semantics and their structuring mechanisms and properties e.g modularity composability and parametrization The effect of using model transformations on organizations and development processes particularly when applied to ultra large scale systems or in distributed enterprises is still not clear These issues and others related to the specification design implementation analysis and experimentation with model transformation are the focus of these proceedings The Second International Conference on Model Transformation ICMT 2009 was held in late June 2009 in Zurich Switzerland
