indeed required to offer familiarity with such developments and underlying concepts to be taught in the classroom to future engineers This is one of the motivations for writing this book Practically no book can be up to date in this field due to the fast ongoing research and developments The new developments are announced almost every day Teaching directly from the research papers in the classroom cannot build the necessary foundation Therefore need for a textbook is unavoidable which is integral to learning and is an essential source to build the concept The prime goal of this book is to cooperate in the learning process This book is based on current research as well as classical text books in the field and aims to provide in depth understanding on fundamental concepts which form the basis of wireless communication and build the platform on which current developments can be understood and future contributions can be made This book is written in self explanatory manner to facilitate critical thinking and to support self study Special emphasis has been given in this book to systematically organize and present the wide domain of wireless communication technology Extra care has been taken to present the contents and the concepts in user friendly way to enable an easy understanding Therefore the language of this book is made to make one feel listening to a classroom lecture This makes learning straight forward Sometimes the explanation could seem to be oversimplified this is in order to support wide spectrum of readers as well as to clarify the hazy picture A book of this kind which addresses a fast developing technology the frequent use of acronyms and abbreviations is almost inevitable A care has been taken to spell the acronyms and abbreviations as frequently as practically suitable in the text Besides a list of acronyms and abbreviations has also been provided
