Heavy Trauma:

Anesthesia for Trauma Corey S. Scher, 2014-08-28 Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment which requires no pre-approval as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an up-to-date comprehensive and clinically focused volume for practitioners and trainees in trauma anesthesia and critical care. It is organized by organ system. The editor is an attending physician at a major urban hospital center recognized worldwide for its outstanding emergency medical services, including trauma care, and is recruiting leading trauma anesthesiologists to contribute. Anesthesiologists, pain medicine physicians, critical care physicians, and trainees are the target audience.

The flashcard format enables trauma survivors to creatively respond to visual aids and prompts in a way that is comfortable for them, providing mental health professionals with a more creative and person-centred approach to directing clients towards their own healing journey. This resource comprises 38 colourful flashcards that can be used as standalone visual aids or as a platform for creative responses. A guidebook delving into the individual cards, their meaning and symbolism, and the research behind them. Additional resources to support the client's development of their own personalised cards. Weaving together psychoeducation, creativity, symbolism, and the latest neuroscientific research, this essential toolkit offers all professionals working in mental health services a creative way to engage clients with therapy, empowering them to develop habits and ways of being that can support their recovery. Intended for use in educational settings and/or therapy contexts under the supervision of an adult. This is not a toy.
