Heidelberg Pm 52 Maintenance Manual:

Efficient Solvers for Incompressible Flow Problems Stefan Turek, 2012-12-06 The scope of this book is to discuss recent numerical and algorithmic tools for the solution of certain flow problems arising in Computational Fluid Dynamics CFD Here we mainly restrict ourselves to the case of the incompressible Navier Stokes equations $U_t + u \cdot \nabla_x U + \nabla_x \cdot (u \otimes u) - \nabla_x \cdot \sigma = f$ These basic equations already play an important role in CFD both for mathematicians as well as for more practical scientists Physically important facts with real life character can be described by them including also economical aspects in industrial applications On the other hand the equations in 1 provide the complete spectrum of numerical problems nowadays concerning the mathematical treatment of partial differential equations Although this field of research may appear to be a small part only inside of CFD it was and still is of great interest for mathematicians as well as engineers physicists computer scientists and many more a fact which can be easily checked by counting the numerous publications Nevertheless our contribution has some unique characteristics since it contains a few of the latest results for the numerical solution of complex flow problems on modern computer platforms In this book our particular emphasis lies on the solution process of the resulting high dimensional discrete systems of equations which is often neglected in other works Together with the included CDROM which contains the FEATFLOW 1
