Helaman Ferguson Claire Ferguson, Helaman Ferguson, 1994 **Modern Differential Geometry of Curves and Surfaces with Mathematica** Elsa Abbena, Simon Salamon, Alfred Gray, 2017-09-06 Presenting theory while using Mathematica in a complementary way Modern Differential Geometry of Curves and Surfaces with Mathematica the third edition of Alfred Gray's famous textbook covers how to define and compute standard geometric functions using Mathematica for constructing new curves and surfaces from existing ones Since Gray's death authors Abbena and Salamon have stepped in to bring the book up to date While maintaining Gray's intuitive approach they reorganized the material to provide a clearer division between the text and the Mathematica code and added a Mathematica notebook as an appendix to each chapter They also address important new topics such as quaternions The approach of this book is at times more computational than is usual for a book on the subject For example Brioshi's formula for the Gaussian curvature in terms of the first fundamental form can be too complicated for use in hand calculations but Mathematica handles it easily either through computations or through graphing curvature Another part of Mathematica that can be used effectively in differential geometry is its special function library where nonstandard spaces of constant curvature can be defined in terms of elliptic functions and then plotted Using the techniques described in this book readers will understand concepts geometrically plotting curves and surfaces on a monitor and then printing them Containing more than 300 illustrations the book demonstrates how to use Mathematica to plot many interesting curves and surfaces Including as many topics of the classical differential geometry and surfaces as possible it highlights important theorems with many examples It includes 300 miniprograms for computing and plotting various geometric objects alleviating the drudgery of computing things such as the curvature and torsion of a curve in space **The Best Writing on Mathematics 2011** Mircea Pitici, 2012 The year's finest writing on mathematics from around the world This anthology brings together the year's finest mathematics writing from around the world Featuring promising new voices alongside some of the foremost names in the field The Best Writing on Mathematics 2011 makes available to a wide audience many articles not easily found anywhere else and you don't need to be a mathematician to enjoy them These writings offer surprising insights into the nature meaning and practice of mathematics today They delve into the history philosophy teaching and everyday occurrences of math and take readers behind the scenes of today's hottest mathematical debates Here Ian Hacking discusses the salient features that distinguish mathematics from other disciplines of the mind Doris Schattschneider identifies some of the mathematical inspirations of M C Escher's art Jordan Ellenberg describes compressed sensing a mathematical field that is reshaping the way people use large sets of data Erica Klarreich reports on the use of algorithms in the job market for doctors and much much more In addition to presenting the year's most memorable writings on mathematics this must have anthology includes a foreword by esteemed physicist and mathematician Freeman Dyson This book belongs on the shelf of anyone interested in where math has taken us and where it is headed

Davis, 2006-11-30 From the Preface This book is addressed to all who are curious about the nature of mathematics and its role in society It is neither a text book nor a specialists book It consists of a number of loosely linked essays that may be read independently and for which I have tried to provide a leitmotif by throwing light on the relationship between mathematics and common sense In these essays I hope to foster a critical attitude towards both the existence of common sense in mathematics and the ambiguous role that it can play **The Eightfold Way** Silvio Levy, 2001-05-28 Expository and research articles by renowned mathematicians on the myriad properties of the Klein quartic **Framework for Mathematics, Science and Technology**, 1994 Knots and Surfaces David W.
