Meeting the Challenges to Measurement in an Era of Accountability Henry Braun,2016-01-29 Under pressure

and support from the federal government states have increasingly turned to indicators based on student test scores to

evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject

areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades

4 8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district

Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume

seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and

subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end

of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case

issues related to design and development psychometric considerations and validity challenges are covered from both a

generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series

includes edited volumes designed to inform research based applications of educational measurement and assessment Edited

by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open
