- Keyboard printer terminal or teletypewriter consists of a keyboard and printer. Keyboard is used to input data to the computer and a printer is used to take a copy of the data (input) or information (output).
- Output is normally typed on a continuous roll of paper at the speed of 20 to 50 CPS.
- If the information is to be retained for subsequent purposes, a paper tape reader/punch is included in the design of the terminal.
- In place of paper tape reader/punch, some recently designed machines are using magnetic tape cassettes for the same purpose.

- Some RJE terminals have the capability of recording back and printing the results of the application program.
- Such a unit is itself a small computer, which can be used either as job entry terminal or as a stand alone computer.
- A terminal may be situated at the computer site or at a remote place where data is more readily available.
- Terminals linked to the computer system by a direct cable are known as cable-attached terminals. However, for remote terminals, communication to the main system can be established via telecommunication lines.

Q.No.9. What is meant by DDE? What are the approaches & devices available for DDE?

- DDE refers to entry of data directly into computers through machine-readable source documents.
- DDE does not require manual transcription of data from original paper documents.
- DDE devices can scan source documents magnetically or optically to capture data for direct entry into the computer.
- Magnetic Ink Character Readers and Optical Character Readers are examples of such devices.

Q.No.10. Write about MICR (Magnetic Ink Character Recognition). (M08-1M, M03-5M, RTP)

Introduction: This method is useful for direct data entry. Here a machine recognizes magnetically changed characters that are printed on source documents. These systems are typically found in banks (used for processing cheques). MICR readers detect the characters and convert them into digital data.

Features:

- It employs MI a system of printed characters, which can be read by human beings as well as machines.
- It uses a special printing font MI to represent characters.
- In this font each character is composed of vertical bars.
- Characters are printed using special ink that consists of magnetisable material.

Character 2 in MICR

How it reads?

- In this system, the data to be read is passed through a reading head.
- Small and big gaps in the character will send different signals to the computer (represented by bit 1 and 0 bit).

Where it is used?

- This method is primarily used in banking industry and most of the cheques are now processed under MICR approach.
- Data about bank identification number, customer's bank account number are directly printed on the cheque, by a printing press. Cheques are then handed over to the customer.
