Gnu Make A Program For Directed Compilation:

   The GNU Make Book John Graham-Cumming,2015 Covers GNU Make basics through advanced topics including user defined functions macros and path handling creating makefile assertions and debugging makefiles parallelization automatic dependency generation rebuilding targets and non recursive Make and using the GNU Make Standard Library   *GNU Make* Richard Stallman,Roland McGrath,Paul D. Smith,2004   **Statistical Computing in C++ and R** Randall L. Eubank,Ana Kupresanin,2011-12-01 With the advancement of statistical methodology inextricably linked to the use of computers new methodological ideas must be translated into usable code and then numerically evaluated relative to competing procedures In response to this Statistical Computing in C and R concentrates on the writing of code rather than the development and study of numerical algorithms per se The book discusses code development in C and R and the use of these symbiotic languages in unison It emphasizes that each offers distinct features that when used in tandem can take code writing beyond what can be obtained from either language alone The text begins with some basics of object oriented languages followed by a boot camp on the use of C and R The authors then discuss code development for the solution of specific computational problems that are relevant to statistics including optimization numerical linear algebra and random number generation Later chapters introduce abstract data structures ADTs and parallel computing concepts The appendices cover R and UNIX Shell programming Features Includes numerous student exercises ranging from elementary to challenging Integrates both C and R for the solution of statistical computing problems Uses C code in R and R functions in C programs Provides downloadable programs available from the authors website The translation of a mathematical problem into its computational analog or analogs is a skill that must be learned like any other by actively solving relevant problems The text reveals the basic principles of algorithmic thinking essential to the modern statistician as well as the fundamental skill of communicating with a computer through the use of the computer languages C and R The book lays the foundation for original code development in a research environment   **Computational Science – ICCS 2019** João M.
