Science as a Cultural Human Right Helle Porsdam, 2022-09-27

The human right to science outlined in the 1948 Universal Declaration of Human Rights and repeated in the 1966 International Covenant on Economic Social and Cultural Rights recognizes everyone's right to share in scientific advancement and its benefits and to enjoy the benefits of scientific progress and its applications This right also requires state parties to develop and disseminate science to respect the freedom of scientific research and to recognize the benefits of international contacts and co operation in the scientific field The right to science has never been more important Even before the COVID 19 health crisis it was evident that people around the world increasingly rely on science and technology in almost every sphere of their lives from the development of medicines and the treatment of diseases to transport agriculture and the facilitation of global communication At the same time however the value of science has been under attack with some raising alarm at the emergence of post truth societies Dual use and unintended because often unforeseen consequences of emerging technologies are also perceived to be a serious risk The important role played by science and technology and the potential for dual use makes it imperative to evaluate scientific research and its products not only on their scientific but also on their human rights merits In Science as a Cultural Human Right Helle Porsdam argues robustly for the role of the right to science now and in the future The book analyzes the legal stature of this right the potential consequences of not establishing it as

fundamental and its connection to global cultural rights It offers the basis for defending the free and responsible practice of science and ensuring that its benefits are spread globally

Brown,2013-05-07 Climate change is now the biggest challenge faced by humanity worldwide and ethics is the crucial missing component in the debate about what to do about this enormous threat This book examines why thirty five years of discussion of human induced warming has failed to acknowledge fundamental ethical concerns and subjects climate change s most important policy questions to ethical analysis This book examines why ethical principles have failed to gain traction in policy formation and recommends specific strategies to ensure that climate change policies are consistent with ethical principles Because climate change is a global problem that requires a global solution and given that many nations refuse participation due to perceived inequities in proposed international solutions this book explains why ensuring that nations sub national governments organizations businesses and individuals acknowledge and respond to their ethical obligations is both an ethical and practical mandate This book is the first of its kind to go beyond a mere account of relevant ethical questions to offer a pragmatic guide on how to make ethical principles influential in formulating the world s response to climate change

Subcommittee on Fisheries and Wildlife Conservation and the Environment,1991 Pollinators and Pesticides Great Britain:

Parliament: House of Commons: Environmental Audit Committee,2013-04-05 If farmers had to pollinate fruit and vegetables without the help of insects it would cost hundreds of millions of pounds and we would all be stung by rising food prices Defra Ministers however have refused to back EU efforts to protect pollinators Disease habitat loss and climate change can all affect insect populations but a growing body of research suggests that neonicotinoids are having an especially damaging impact on pollinators The weight of scientific evidence now warrants precautionary action so the Committee is calling for a moratorium on pesticides linked to bee decline to be introduced by 1 January next year An EU wide moratorium on the use of imidacloprid clothianidin and TMX on crops attractive to bees following a recent risk warning from the European Food Safety Authority has also been proposed Many of the UK s largest garden retailers have voluntarily withdrawn non professional plant protection products that contain neonicotinoids A full ban on the sale of neonicotinoids for public domestic use which could create an urban safe haven for pollinators is recommended The pesticide industry must open itself to greater academic scrutiny if it wants to justify its continued opposition to the precautionary protection of pollinators The Government s National Action Plan for the Sustainable Use of Pesticides published earlier this year was a missed opportunity according to

the Committee Clearer targets are needed to reduce reliance on pesticides as far as possible And Integrated Pest Management which emphasises alternatives to pesticides but does not preclude their use should be made the central principle of the plan **1980 Authorization for the Office of Research and Development, Environmental Protection Agency** United States. Congress. House. Committee on Science and Technology. Subcommittee on Natural Resources and Environment,1979 **The Gulf War Aftermath** M. Sadiq,J.C. McCain,2012-12-06 In 1962 Rachel Carson warned of the consequences of man s pollution in her book Silent Spring a book that some feel marks the real beginning of our environmental awareness Silent Spring told of the consequences of our increasing pesticide use to birds Almost 30 years after her warning the western Arabian Gulf experienced its silent spring when approximately 100 000 to 250 000 waterbirds died along with millions of other organisms due to the massive oil spill that resulted due to Gulf war The magnitude of our environmental problems has continued to grow during the last thirty years to a point where even the doomsday environmentalists could hardly have envisioned back in 1962 It seems the death of yet uncounted thousands of humans was not sufficient for Saddam Husain His desire for power and infamy led him to unleash environmental war on mankind At the end of the Gulf war he set ablaze the oil fields of Kuwait and released more oil into the sea than had been spilled at any time throughout history These actions were despicable and an affront to civilized man A quality environment should be a right of all mankind and to wage war by deliberately polluting the earth cannot be tolerated Cancer and Other Human Diseases United States.
