our oceans *Routledge Handbook of National and Regional Ocean Policies* Biliana Cicin-Sain, David Vanderzwaag, Miriam C. Balgos, 2015-05-15 This comprehensive handbook prepared by leading ocean policy academics and practitioners from around the world presents in depth analyses of the experiences of fifteen developed and developing nations and four key regions of the world that have taken concrete steps toward cross cutting and integrated national and regional ocean policy. All chapters follow a common framework for policy analysis. While most coastal nations of the world already have a variety of sectoral policies in place to manage different uses of the ocean such as shipping, fishing, oil and gas development, in the last two decades the coastal nations covered in the book have undertaken concerted efforts to articulate and implement an integrated ecosystem based vision for the governance of ocean areas under their jurisdiction. This includes goals and procedures to harmonize existing uses and laws to foster sustainable development of ocean areas to protect biodiversity and vulnerable resources and ecosystems and to coordinate the actions of the many government agencies that are typically involved in oceans affairs. The book highlights the serious conflicts of use in most national ocean zones and the varying attempts by nations to follow the prescriptions emanating from the 1982 UN Law of the Sea Convention and the outcomes of the 1992, 2002 and 2012 sustainable development summits. The interrelationship among uses and processes in the coast and ocean requires that ocean governance be integrated, precautionary and anticipatory. Overall, the book provides a definitive state of the art review and analysis of national and regional ocean policies around the world. Managing Deep-sea Ecosystems at Ocean Basin Scale, Volume 1 J. Murray Roberts, Telmo Morato, 2022-04-01 **Science, Technology, and New Challenges to Ocean Law** Harry N. Scheiber, James Kraska, Moon-Sang Kwon, 2015-08-25 Science Technology and New Challenges to Ocean Law offers fresh perspectives on a set of vital issues in the field of ocean law and policy. Since the early period of the industrial revolution successive waves of revolutionary scientific discoveries and technological innovations have intensified the global population's exploitation of ocean and coastal resources. In this volume several leading authorities in the field address major dimensions of the interface of science, technology and ocean law both historically and in current day perspective and emergent challenges in legal ordering of ocean uses for sustainability and equitability. Among the topics that are analysed in these readable accessible papers are ecosystem approaches to resource management, the historic interplay of science and military concerns, the place of science in dispute settlement processes, the varied human uses of the seabed, the roles in ocean governance of indigenous peoples, legal issues in fisheries management and conservation and special regional problems of the Arctic, the Bering Strait, the South China Sea and the eastern Mediterranean. The urgent importance of the subjects addressed here together with the variety of disciplinary approaches deployed by the authors enhance the value of this book's unique contribution to the literature of ocean studies. Conserving Biodiversity in Areas beyond National Jurisdiction David Freestone, 2019-02-19 Since 2006 the United Nations General Assembly (UNGA) has been discussing the question of the conservation and sustainable use of biodiversity in areas beyond national jurisdiction.
