Little Bit Light Dark:

Spiritcarvers Antonella Sarti, 2022-06-08 In a land caught between the sea and cloud where the natural landscape still refuses civilization there are those the composers of words tellers of tales that help shape the minds of the people that live on its shores They are spiritcarvers New Zealand writing today is engaging in an intent struggle to subvert multiple shapes into voices These interviews as a record of biographical orature are shaped into presenting the figure of the storyteller through memory and language explorations of how we imagine and create ourselves with and into words Here we encounter the dichotomy of fiction and non fiction myth and consensual reality imagination and truth do we live within our own selected fictions Identity is shaped by the authors sense of displacement as well as of belonging meeting otherness with dispossession discovering connection through isolation Among the focal points of the interviews are the role of women s writing Maori writing interrelations among different cultures and the influence of literary and oral tradition within New Zealand

Chronobioengineering Donald McEachron, 2022-06-01 This book represents the first in a two volume set on biological rhythms This volume focuses on supporting the claim that biological rhythms are universal and essential characteristics of living organisms critical for proper functioning of any living system The author begins by examining the potential reasons for the evolution of biological rhythms 1 the need for complex goal oriented devices to control the timing of their activities 2 the inherent tendency of feedback control systems to oscillate and 3 the existence of stable and powerful geophysical cycles to which all organisms must adapt To investigate the second reason the author enlists the help of biomedical engineering students to develop mathematical models of various biological systems One such model involves a typical endocrine feedback system By adjusting various model parameters it was found that creating a oscillation in any component of the model generated a rhythmic cascade that made the entire system oscillate This same approach was used to show how daily light dark cycles could cascade rhythmic patterns throughout ecosystems and within organisms Following up on these results the author discusses how the twin requirements of internal synchronization precise temporal order necessary for the proper functioning of organisms as complex goal oriented devices and external synchronization aligning organisms behavior and physiology with geophysical cycles supported the evolution of biological clocks The author then investigates the clock systems that evolved using both conceptual and mathematical models with the assistance of Dr Bahrad Sokhansanj who contributes a chapter on mathematical formulations and models of rhythmic phenomena With the ubiquity of biological rhythms established the author suggests a new classification system the F4LM approach Function Frequency waveForm Flexibility Level of biological system expressing rhythms and Mode of rhythm generation to investigate biological rhythms This approach is first used on the more familiar cardiac cycle and then on neural rhythms as exemplified and measured by the electroencephalogram During the process of investigating neural cycles the author finds yet another reason for the evolution of biological rhythms physical constraints such as those imposed upon long distance neural signaling In addition a

common theme emerges of a select number of autorhythmic biological oscillators imposing coherent rhythmicity on a larger network or system During the course of the volume the author uses a variety of observations models experimental results and arguments to support the original claim of the importance and universality of biological rhythms In Volume 2 the author will move from the establishment of the critical nature of biological rhythms to how these phenomena may be used to improve human health well being and productivity In a sense Volume 1 focuses on the chronobio aspect of chronobioengineering while Volume 2 investigates methods of translating this knowledge into applications the engineering aspect of chronobioengineering

Palmer, 2002-03-14 From one celled paramecium to giant blue whales we all have internal clocks that regulate the rhythms we live by In *The Living Clock* John Palmer one of the world's leading authorities on these rhythms takes us on a tour of this broad and multifaceted subject examining everything from glowing fruit flies to the best cures for jet lag Palmer has a wonderful sense of humor and an eye for the startling fact We learn that fiddler crabs in a lab where there are no time nor tide cues remain active when low tide would occur and motionless during high tide the same pattern they follow in their natural habitat In fact you can remove a crab's leg and the leg will keep a tidal rhythm as long as it's kept alive Moreover humans are subject to more than one hundred biological rhythms Mental acuity peaks in the afternoon for instance and our blood pressure peaks at seven in the morning when most heart attacks occur The time of day you take medication can affect how well it works And Palmer shows that when our clocks are thrown off kilter trouble follows especially for rotating shift workers the Bhopal spill the Chernobyl reactor explosion and the Three Mile Island accident all happened when new crews began early hour shifts No one has discovered exactly how our internal clocks work Palmer says a Nobel Prize awaits that lucky scientist but they are no less fascinating for their inexplicable nature Frequently amusing and
