The Human and

Environmental Impact of Fracking Madelon L. Finkel, 2015-03-24 Fracking for gas trapped in shale could be a game changer in the quest to find alternatives to dirty fossil fuels but it also has potential for harm This book provides one stop shopping for everyone who wants to know more about the issues Oil and gas account for a large percentage of the world's energy consumption and the search for new ways to extract both from the earth is a global quest Fracking is viewed as an energy game changer but is a controversial topic about which there is much misunderstanding This unbiased work was written to bring clarity to the issues Under the guidance of an internationally recognized public health expert this book provides a comprehensive look at unconventional natural gas development from many different perspectives Written for the layperson the book dispels myths surrounding fracking corrects misconceptions and offers impartial scientifically based information on both benefits and challenges Readers will learn about the effects fracking has on the environment our water air and climate as well as on human and animal health The contributors also look at the economics of fracking and at its socioeconomic impact on local communities and nations They discuss legal and ethical issues related to the practice and in keeping with the intent to provide a fair and balanced overview share the industry perspective as well **Evidence Matters**, 2013 *Climate Change Solutions and Environmental Migration* Anna Ginty, 2021-04-20 This book lifts the taboo on maladaptation a different driver of environmentally induced migration which shines a light on the negative consequences arising from the solutions to climate change adaptation and mitigation policies Through a systematic analysis and critique of existing mitigation and adaptation policies under the United Nations Framework Convention on Climate Change UNFCCC and international development community and supplemented by a small empirical study in Indonesia this book catalogues how maladaptation is manufactured under existing climate change solutions It posits that customary communities in general and women in particular are disproportionately affected by the dominant market driven logics that underscore current climate change solutions adopted by the UNFCCC The injustice of maladaptation is highlighted as multi faceted and explored using political economic social and ecological lenses and the concept of environmental reintegration is also explored as a possible solution to this issue Further possibilities are then presented in the Afterword as a combination of what the new post neoliberalism conjuncture could potentially look like This volume will be of great interest to students scholars and practitioners of climate change environmental policy environmental migration and displacement development studies I NGOs and civil society actors and activists more broadly Environmental Health Howard Frumkin, 2016-02-09 The bestselling environmental health text with all new coverage of key topics Environmental Health From Global to Local is a comprehensive introduction to the subject and a contemporary authoritative text for students of public health environmental health preventive medicine community health and environmental studies Edited by the former director of the CDC's National Center for Environmental Health and current dean of the School of Public Health at the University of Washington this book provides a multi faceted view of the topic and how it affects different regions populations and professions In addition to traditional

environmental health topics air water chemical toxins radiation pest control it offers remarkably broad cross cutting coverage including such topics as building design urban and regional planning energy transportation disaster preparedness and response climate change and environmental psychology This new third edition maintains its strong grounding in evidence and has been revised for greater readability with new coverage of ecology sustainability and vulnerable populations with integrated coverage of policy issues and with a more global focus Environmental health is a critically important topic and it reaches into fields as diverse as communications technology regulatory policy medicine and law This book is a well rounded guide that addresses the field s most pressing concerns with a practical bent that takes the material beyond theory Explore the cross discipline manifestations of environmental health Understand the global ramifications of population and climate change Learn how environmental issues affect health and well being closer to home Discover how different fields incorporate environmental health perspectives The first law of ecology reminds is that everything is connected to everything else Each piece of the system affects the whole and the whole must sustain us all for the long term Environmental Health lays out the facts makes the connections and demonstrates the importance of these crucial issues to human health and well being both on a global scale and in our homes workplaces and neighborhoods

The Microbial Regulation of Global Biogeochemical Cycles Johannes Rousk, Per Bengtson, 2014-10-17 Global biogeochemical cycles of carbon and nutrients are increasingly affected by human activities So far modeling has been central for our understanding of how this will affect ecosystem functioning and the biogeochemical cycling of carbon and nutrients These models have been forced to adopt a reductive approach built on the flow of carbon and nutrients between pools that are difficult or even impossible to verify with empirical evidence Furthermore while some of these models include the response in physiology ecology and biogeography of primary producers to environmental change the microbial part of the ecosystem is generally poorly represented or lacking altogether The principal pool of carbon and nutrients in soil is the organic matter The turnover of this reservoir is governed by microorganisms that act as catalytic converters of environmental conditions into biogeochemical cycling of carbon and nutrients The dependency of this conversion activity on individual environmental conditions such as pH moisture and temperature has been frequently studied On the contrary only rarely have the microorganisms involved in carrying out the processes been identified and one of the biggest challenges for advancing our understanding of biogeochemical processes is to identify the microorganisms carrying out a specific set of metabolic processes and how they partition their carbon and nutrient use We also need to identify the factors governing these activities and if they result in feedback mechanisms that alter the growth activity and interaction between primary producers and microorganisms By determining how different groups of microorganisms respond to individual environmental conditions by allocating carbon and nutrients to production of biomass CO₂ and other products a mechanistic as well as quantitative understanding of formation and decomposition of organic matter and the production and consumption of greenhouse gases can be achieved In this Research Topic supported

by the Swedish research councils programme Biodiversity and Ecosystem Services in a Changing Landscape BECC we intend to promote this alternative framework to address how cycling of carbon and nutrients will be altered in a changing environment from the first principle mechanisms that drive them namely the ecology physiology and biogeography of microorganisms and on up to emerging global biogeochemical patterns This novel and unconventional approach has the potential to generate fresh insights that can open up new horizons and stimulate rapid conceptual development in our basic understanding of the regulating factors for global biogeochemical cycles The vision for the research topic is to facilitate such progress by bringing together leading scientists as proponents of several disciplines By bridging Microbial Ecology and Biogeochemistry connecting microbial activities at the micro scale to carbon fluxes at the ecosystem scale and linking above and belowground ecosystem functioning we can leap forward from the current understanding of the global biogeochemical cycles

Fatness, Obesity, and Disadvantage in the Australian Suburbs Megan Warin,Tanya Zivkovic,2019-03-18 This ethnography takes the reader into the Australian suburbs to learn about food eating and bodies during the highly political context of one of Australia s largest childhood obesity interventions While there is ample evidence about the number of people who are overweight or obese and an abundance of information about what and how to eat obesity remains a problem in high income countries such as Australia Rather than rely on common assumptions that people are making all the wrong choices this volume reveals the challenges of eating healthy when money is scarce and how different versions of being fat and doing fat happen in everyday worlds of precarity Without acknowledgement of the multiple realities of fatness and obesity interventions will continue to have limited reach

Green Building in Developing Countries Zhonghua Gou,2019-07-30 The book reveals how green buildings are currently being adapted and applied in developing countries It includes the major developing countries such as China Indonesia Malaysia Thailand Pakistan Cambodia Ghana Nigeria and countries from the Middle East and gathers the insights of respected green building researchers from these areas to map out the developing world s green building revolution The book highlights these countries contribution to tackling climate change emphasising the green building benefits and the research behind them The contributing authors explore how the green building revolution has spread to developing countries and how national governments have initiated their own green building policies and agendas They also explore how the market has echoed the green building policy and how a business case for green buildings has been established In turn they show how an international set of green building standards in the form of various techniques and tools has been incorporated into local building and construction practices In closing they demonstrate how the developing world is emerging as a key player for addressing the energy and environmental problems currently facing the world The book helps developers designers and policy makers in governments and green building stakeholders to make better decisions on the basis of global and local conditions It is also of interest to engineers designers facility managers and researchers as it provides a holistic picture of how the industry is responding to the worldwide call for greener and more
