Living Weapons Biological Warfare And International Security Cornell Studies In Security Affairs:

Living Weapons Gregory D. Koblentz, 2011-05-16 Biological weapons are widely feared yet rarely used Biological weapons were the first weapon prohibited by an international treaty yet the proliferation of these weapons increased after they were banned in 1972 Biological weapons are frequently called the poor man's atomic bomb yet they cannot provide the same deterrent capability as nuclear weapons One of my goals in this book is to explain the underlying principles of these apparent paradoxes from *Living Weapons* Biological weapons are the least well understood of the so called weapons of mass destruction Unlike nuclear and chemical weapons biological weapons are composed of or derived from living organisms In *Living Weapons* Gregory D Koblentz provides a comprehensive analysis of the unique challenges that biological weapons pose for international security At a time when the United States enjoys overwhelming conventional military superiority biological weapons have emerged as an attractive means for less powerful states and terrorist groups to wage asymmetric warfare Koblentz also warns that advances in the life sciences have the potential to heighten the lethality and variety of biological weapons The considerable overlap between the equipment materials and knowledge required to develop biological weapons conduct civilian biomedical research and develop biological defenses creates a multiuse dilemma that limits the effectiveness of verification hinders civilian oversight and complicates threat assessments *Living Weapons* draws on the American Soviet Russian South African and Iraqi biological weapons programs to enhance our understanding of the special challenges posed by these weapons for arms control deterrence civilian military relations and intelligence Koblentz also examines the aspirations of terrorist groups to develop these weapons and the obstacles they have faced Biological weapons Koblentz argues will continue to threaten international security until defenses against such weapons are improved governments can reliably detect biological weapon activities the proliferation of materials and expertise is limited and international norms against the possession and use of biological weapons are strengthened **Germ Warfare** Amy

Romano, Margaux Baum, 2016-07-15 Among the most fearsome tools of the modern era of war and certainly one of the most controversial biological weapons exist within the arsenals of many nations This book discusses the history of biological warfare from ancient times through the modern era and examines the various types of weaponized organisms that can and have been used by nations and may be used by nonstate actors in potential acts of bioterrorism It also documents the preventative measures that governments and the international community employ to curtail the use of these thankfully rarely used but nonetheless terrifying weapons **Routledge Handbook of Global Health Security** Simon Rushton, Jeremy

Youde, 2014-08-07 This new Handbook presents an overview of cutting edge research in the growing field of global health security Over the past decade the study of global health and its interconnection with security has become a prominent and rapidly growing field of research Ongoing debates question whether health and security should be linked which if any health issues should be treated as security threats what should be done to address health security threats and the positive and

negative consequences of securitizing health In academic and policy terms the health security field is a timely and dynamic one and this handbook will be the first work comprehensively to address this agenda Bringing together the leading experts and commentators on health security issues from across the world the volume comprises original and cutting edge essays addressing the key issues in the field and also highlighting currently neglected avenues for future research The book intends to provide an accessible yet sophisticated introduction to the key topics and debates and is organised into four key parts Health Securities the fundamental conceptual issues historical links between health and security and the various ways of conceptualising health as a security issue Threats those health issues which have been most frequently discussed in security terms Responses the wide range of contemporary security driven responses to health threats Controversies the securitization of health its impact on rights and justice and the potential distortion of the global health agenda This book will be of great interest to students of global health security public health critical security studies and International Relations in general

Ask What You Can Do For Your (New) Country Nadejda K Marinova, 2017-06-01 Within recent years a new body of literature has emerged within international relations on transnationalism and foreign policy This literature has thus far focused on the strategic relationship between home states and their ethnic lobbies abroad often with regard to remittances to and politics in the home country This book breaks new ground in that it develops a theory about when how and for what reasons host states use diasporas and the ethnic lobbies they generate to advance foreign policy goals Ask What You Can Do for Your New Country focuses on a previously unexamined phenomenon how host governments utilize diasporas to advance their foreign policy agendas in mutually beneficial ways As was demonstrated in the run up to the 2003 invasion of Iraq when Iraqi exiles testified that Saddam Hussein possessed weapons of mass destruction ethnic lobbies have been utilized strategically by the United States and other countries for the promotion of political objectives Host states have even promoted the creation of such ethnic lobbies for this purpose As Nadejda K Marinova shows those who participate in such lobbies are of a particular subset of migrants who are politically active express a sustained vision for homeland politics and who often have existing ties to political institutions within the host state These groups then act as a link between the public and officials in their home state and other generally less politically active members of the diaspora via a coordinated effort by the host state She develops a theoretical model for determining the conditions under which a host state will decide to promote and utilize an ethnic lobby and she tests it against eight cases including the Bush Administration's use of the American Lebanese Cultural Union and the World Council for the Cedars Revolution in developing policy towards Lebanon and Syria the Iraqi National Congress in endorsing the US invasion of Iraq the Cuban American Committee's cooperation with the Carter administration in attempting to normalize relations with Cuba and the International Diaspora Engagement Alliance IDEA launched by Secretary of State Hillary Clinton in 2011 to promote economic development in a number of countries

The Myth of the Poor Man's Atomic Bomb and the Politics of Proliferation Biejan Poor Toulabi, 2021-04-07 Preventing the

spread of weapons of mass destruction has been an important policy priority in the past decades This dissertation questions the prevailing view that chemical and biological weapons CBWs are a poor man s atomic bomb that are particularly attractive to developing countries that cannot acquire nuclear weapons The study shows that vague unverifiable and inflated threat assessments from US government sources have played an important role in sustaining this myth A unique dataset of CBW development programs in the period 1946 2010 demonstrates that significantly fewer countries have had CBW programs than often thought and that especially Third World countries have been incorrectly accused of pursuing or possessing CBWs

Barriers to Bioweapons Sonia Ben Ouagrham-Gormley, 2014-12-15 In both the popular imagination and among lawmakers and national security experts there exists the belief that with sufficient motivation and material resources states or terrorist groups can produce bioweapons easily cheaply and successfully In **Barriers to Bioweapons** Sonia Ben Ouagrham Gormley challenges this perception by showing that bioweapons development is a difficult protracted and expensive endeavor rarely achieving the expected results whatever the magnitude of investment Her findings are based on extensive interviews she conducted with former U S and Soviet era bioweapons scientists and on careful analysis of archival data and other historical documents related to various state and terrorist bioweapons programs Bioweapons development relies on living organisms that are sensitive to their environment and handling conditions and therefore behave unpredictably These features place a greater premium on specialized knowledge Ben Ouagrham Gormley posits that lack of access to such intellectual capital constitutes the greatest barrier to the making of bioweapons She integrates theories drawn from economics the sociology of science

organization and management with her empirical research The resulting theoretical framework rests on the idea that the pace and success of a bioweapons development program can be measured by its ability to ensure the creation and transfer of scientific and technical knowledge The specific organizational managerial social political and economic conditions necessary for success are difficult to achieve particularly in covert programs where the need to prevent detection imposes managerial and organizational conditions that conflict with knowledge production
