BUCHATSKY STCHERBIC (LEONID P.), Leonid P Buchatsky, 2020-12-18 This book provides a review of biochemistry as an algebra of molecules of living matter and utilizes Clifford algebras to discuss the basic biochemical processes of DNA replication DNA transcription RNA splicing and translation Viral carcinogenesis is discussed in depth specific attention is paid to the structural features of biomolecules that define a particular Clifford algebra and useful examples of genetic information being transformed into Clifford algebras are provided **An Introduction to the Mathematics of Biology: with Computer Algebra Models** Edward K. Yeagers, James V. Herod, Ronald W. Shonkweiler, 2013-12-01 Biology is a source of fascination for most scientists whether their training is in the life sciences or not In particular there is a special satisfaction in discovering an understanding of biology in the context of another science like mathematics Fortunately there are plenty of interesting and fun problems in biology and virtually all scientific disciplines have become the richer for it For example two major journals Mathematical Biosciences and Journal of Mathematical Biology have tripled in size since their inceptions 20 25 years ago The various sciences have a great deal to give to one another but there are still too many fences separating them In writing this book we have adopted the philosophy that mathematical biology is not merely the intrusion of one science into another but has a unity of its own in which both the biology and the mathematics should be equal and complete and should flow smoothly into and out of one another We have taught mathematical biology with this philosophy in mind and have seen profound changes in the outlooks of our science and engineering students The attitude of Oh no another pendulum on a spring problem or Yet one more LCD circuit completely

disappeared in the face of applications of mathematics in biology There is a timeliness in calculating a protocol for administering a drug

*Algebras, Rings and Modules* Michiel Hazewinkel, Nadiya M. Gubareni, 2016-04-05 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century

**Representation and Reality in Humans, Other Living Organisms and Intelligent Machines** Gordana Dodig-Crnkovic, Raffaella Giovagnoli, 2017-08-29 This book enriches our views on representation and deepens our understanding of its different aspects It arises out of several years of dialog between the editors and the authors an interdisciplinary team of highly experienced researchers and it reflects the best contemporary view of representation and reality in humans other living beings and intelligent machines

Structured into parts on the cognitive computational natural sciences philosophical logical and machine perspectives a theme of the field and the book is building and presenting networks and the editors hope that the contributed chapters will spur understanding and collaboration between researchers in domains such as computer science philosophy logic systems theory engineering psychology sociology anthropology neuroscience linguistics and synthetic biology *The End of Modern Medicine* Laurence Foss,2012-02-01 The End of Modern Medicine chronicles the work of a small influential band of medical theorists and clinicians who over the past decade have sought to redress the physical fundamentalism of the biomedical model that shaped their professional training Laurence Foss challenges the prevailing medical model whereby mind and body are essentially separated and charts a new psychobiological course Asking fresh questions raising new possibilities probing long established preconceptions Foss presents a radically reconfigured medical model This model accounts for the full range of findings in the experimental literature most notably those surfacing over the past quarter century in psychophysiological studies which show a correlation between psychosocial variables and disease susceptibility that are in line with what more basic sciences tell us about the behavior of material systems and the nature of scientific explanation Foss also critically analyzes the regulative ideals of today's medical research community and puts modern science itself from which these ideals derive under a microscope **The Shaping of Life** Lionel G. Harrison,2010-12-23 Biological development how organisms acquire their form is one of the great frontiers in science While a vast knowledge of the molecules involved in development has been gained in recent decades big questions remain on the molecular organization and physics that shape cells tissues and organisms Physical scientists and biologists traditionally have very different backgrounds and perspectives yet some of the fundamental questions in developmental biology will only be answered by combining expertise from a range of disciplines This book is a personal account by Professor Lionel Harrison of an interdisciplinary approach to studying biological pattern formation It articulates the power of studying dynamics in development that to understand how an organism is made we must not only know the structure of its molecules we must also understand how they interact and how fast they do so

**Dynamical System Models In The Life Sciences And Their Underlying Scientific Issues** Frederic Y M Wan,2017-08-16 Broadly speaking there are two general approaches to teaching mathematical modeling 1 the case study approach and 2 the method based approach that teaches mathematical techniques with applications to relevant mathematical models This text emphasizes instead the scientific issues for modeling different phenomena For the natural or harvested growth of a fish population we may be interested in the evolution of the population whether it reaches a steady state equilibrium or cycle stable or unstable with respect to a small perturbation from equilibrium or whether a small change in the environment would cause a catastrophic change etc Each scientific issue requires an appropriate model and a different set of mathematical tools to extract information from the model Models examined are chosen to help explain or justify empirical observations such as cocktail drug treatments are more effective and regenerations after injuries or illness are fast

tracked compared to original developments Volume I of this three volume set limits its scope to phenomena and scientific issues that are modeled by ordinary differential equations ODE Scientific issues such as signal and wave propagation diffusion and shock formation involving spatial dynamics to be modeled by partial differential equations PDE will be treated in Vol II Scientific issues involving randomness and uncertainty are examined in Vol III
