

FUTURA 21

I have been trying to think of the earth

The second is the myriad lines for rigid offshore jurisdiction That people believe the diversity of life on land should be protected is reflected in well publicized efforts to save the celebrated biodiversity of rainforests Far less is known however about protecting a larger two thirds of this planet the oceans Drawing on academic literature and practical experience Wilder illustrates the nature of the questions facing decision makers and provides intelligent well crafted solutions By describing how the emerging idea of precautionary action can help build second generation policy Wilder offers means to halt problematic overfishing He integrates political science with the goals of environmental protection revealing why agencies often fail in their mission to preserve the environment and offers fresh sensible new paths ahead Wilder shows how damage to marine ecosystems often stems from distant land based activities and details emerging ideas such as how industrial ecology can be a cost effective way to prevent pollution Through a rigorous integration of policy and science Wilder suggests a much improved second generation governance of the ocean and coasts and proposes new ideas for resolving the environmental policy stalemate found within the U S government
