

Base your answers to questions 13 and 14 on the information and diagram below and on prior knowledge of biology.

Scientists attempted to determine the evolutionary relationships between three different fish species, A, B, and C. In order to do this, they examined the physical characteristics and DNA of these species. DNA was extracted from all three species and analyzed using gel electrophoresis. The results are shown in the diagram.

13. Which statement best describes the method used above to determine the evolutionary relationships between three species of fishes?
- Examine the structure of the bones and compare them.
 - Observe behavioral and physical characteristics of all the fishes and group them by similarities.
 - Obtain molecular evidence from all three species and identify similarities.
 - Compare chromosomal structures of all three of the species to see if they are the same.
14. Based on the data they collected using gel electrophoresis, label the branching tree diagram below. Write the letters A, B, and C, to represent the possible evolutionary relationships between species A, B, and C. [1]
