Effective Grading Practices for Secondary Teachers Dave Nagel, 2015-03-04 Enact innovative grading systems that more accurately describe student progress. This book challenges traditional grading practices and provides alternatives that can have direct impact on student success. By making subtle shifts toward standards-based grading systems, schools can reduce unnecessary course failures, provide students and their families a more accurate picture of current progress, and increase opportunities for success. The author offers a range of grading reform strategies that are built from practical frameworks that are effective and simple to adapt. Among the many strengths of this book are: Practical application of existing research and evidence base for effective secondary grading reforms; A framework for schools and districts to apply and adapt failure prevention strategies such as early failure detection, Amnesty Days, and meaningful stipulated second chance opportunities for students to reach mastery; Functional strategies and actions for shifting toward standards-based referenced grading without entirely abandoning letter grades; Countering resistance to change through a clearly articulated plan for conducting school-wide and classroom-level action research around the effectiveness of new or adjusted grading practices; Informative and pragmatic: this book is spot-on with analysis of this elephant in the room issue. Nagel uses both empathy and humor in getting to the heart of a process to generate real solutions while underscoring the ultimate need for teacher voice in any successful implementation. He provides ready-made strategies for real impactful change. I'm left hopeful that feedback will rule the day. Bruce Potter, Superintendent, Berkshire UFSD. Nagel offers an insightful and articulate voice to secondary improvement and alignment through grading practices. His tried and true methods, through working with real districts, provides a starting place and examples for others to follow. A must-read for anyone serious about ensuring student engagement through meaningful feedback. Debra K. Howe, Superintendent, Tri-Creek School Corporation *Not Paved for Us*

Camika Royal, 2022-07-19 Winner of the 2024 AERA Outstanding Book Award *Not Paved for Us* chronicles a fifty year period in Philadelphia education and offers a critical look at how school reform efforts do and do not transform outcomes for Black students and educators This illuminating book offers an extensive expert analysis of a school system that bears the legacy hallmarks and consequences that lie at the intersection of race and education Urban education scholar Camika Royal deftly analyzes decades of efforts aimed at improving school performance within the School District of Philadelphia SDP in a brisk survey spanning every SDP superintendency from the 1960s through 2017 Royal interrogates the history of education and educational reforms recounting city state and federal interventions She covers SDP's connections with the Common School Movement and the advent of the Philadelphia Freedom Schools and she addresses federal policy shifts from school desegregation to the No Child Left Behind and Every Student Succeeds Acts Her survey provides sociopolitical context and rich groundwork for a nuanced examination of why many large urban districts struggle to implement reforms with fidelity and in ways that advance Black students academically and holistically In a bracing critique Royal bears witness to the ways in which positive public school reform has been obstructed through racism and racial capitalism but also via liberal ideals neoliberal practices and austerity tactics Royal shows how despite the well intended actions of larger entities the weight of school reform here as in other large urban districts has been borne by educators striving to meet the extensive needs of their students families and communities with only the slightest material financial and human resources She draws on the experiences of Black educators and community members and documents their contributions *Not Paved for Us* highlights the experiences of Black educators as they navigate the racial and cultural politics of urban school reform Ultimately Royal names dissects and challenges the presence of racism in school reform policies and practices while calling for an antiracist future

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and

general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
