

MATHEMATICAL LITERACY – GRADE 12 NOTES

CHAPTER 6

6.1 Interpreting and analysing data

Purposes of graphs:

- a way of exploring the relationships in data
- a way of displaying and reporting data
- making it easier to report patterns and relationships, shapes of distributions and trends.

Any graph used to report findings should show:

- the significant features and findings of the investigation in a fair and easy-to-read way
- the underlying structure of an investigation in terms of the relationships between and within the variables
- the dependent variable on the horizontal (x) axis and the independent variable on the vertical (y) axis.

Types of graphs

We have the following types of graphs:

- Line graph
- Bar graph
- Histogram
- Scatter plot
- Pie chart
- Box and whisker plot

6.1.1 Line graphs

In data handling we use line graphs to show the relationship between two quantities. A line graph is formed by using straight lines to join data points which have been mapped on a grid. It is used to show the change of information over time.

Worked example 10

The table below shows the average number of minutes per month that Jabu spent watching TV from January to November last year.

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov
Daily TV viewing time (min)	108	103	108	120	115	122	116	105	110	105	104

- Plot this data on a set of axes.
- Can you observe any trends or patterns in the data? Give some possible reasons for these trends.
- Would you be able to represent this data on a bar graph?
- What is the advantage of using a line graph to show this information?

International Perspectives on Teaching and Learning for Mathematical Literacy, 2024-10-02 Mathematics plays an important role in today's world and is used in daily life more than is often appreciated. Mathematical literacy denotes the competence to deal with the mathematical issues of life in modern society. The underlying purpose of this book is to support the development of rich understandings and practices of how an education for mathematical literacy can be realised. The collected works emerging from several educational systems offer a fresh perspective on mathematical literacy and the chapters include practical examples that teachers, pre-service teachers and teacher educators might adapt to their own needs.

Teaching Social Studies to Multilingual Learners in High School Mark Newman, Xiaoning Chen, 2021-11-15
Teaching Social Studies to Multilingual Learners in High School: Connecting Inquiry and Visual Literacy to Promote Progressive Learning explores effective strategies for teaching social studies to diverse learners. The centerpiece is a visual literacy framework that integrates inquiry, primary source analysis and visual literacy to provide a progressive learning sequence to meet the varied needs of learners. The visual literacy framework brings together related aspects of progressive sequential learning into a cohesive whole. It has an adaptable structure that allows teachers to customize learning activities to meet individual student needs. The progressive learning sequence has varied modes of learning that help teachers move students from basic to proficient to advanced levels of support. The book is organized into two related parts. The first three chapters provide important content and context on social studies, multilingual learner education and the visual literacy framework. The remaining chapters discuss civics, U.S. history, world history, geography and economics and social sciences. Each chapter defines the subject area, briefly traces its development as a high school subject over time and then offers classroom exercises for using the visual literacy framework in these disciplines. The exercises are plotted so that differing levels of the visual literacy framework are explored throughout the book.
