Science Education as a Pathway to Teaching Language Literacy , 2010-01-01 In this era of mandated high stakes and standardized testing teachers and schools officials find themselves struggling to meet the demands for improved student achievement At the same time they are also expected to teach all subjects as required by national and state curriculum standards Because of these competing demands science is not even taught or taught less often in order to make more room for mathematics and language arts drill and practice and teaching to the test Anyone concerned with providing students with a well rounded education should ask whether these drastic measures even if they were to show improvement in achievement justify denying children access to the unique opportunities for intellectual growth and social awareness that the effective instruction of science provides Will these students have enough exposure to the science curriculum to prepare them to do well later in middle and high school How is this current situation going to help ameliorate the pervasive achievement gap in science and how is it going to motivate students to pursue science related careers The authors of this book believe that instead of sacrificing the science curriculum to make more time for drill and practice in mathematics and language arts what should be done is to connect current research on literacy and science instruction with effective pedagogy Therefore this volume provides fresh theoretical insights and practical applications for better understanding how science can be used as a pathway to teaching literacy and hence as a pathway to improving teachers practice and students learning

Growing Language Through Science, K-5 Judy Reinhartz, 2015-03-25

Foster life-long teacher learning embedded in effective teaching practices and the science standards. Science is a natural motivator and an academic engine for utilizing language, but it is the teacher who is the key to fostering the innate curiosity in each learner. Growing Language Through Science offers a model for contextualizing language and promoting academic success for all students, particularly English learners in the K-5 science classroom, through a highly effective approach that integrates inquiry-based science lessons with language-rich hands-on experiences. You'll find a wealth of instructional tools to support and engage students with links to the Next Generation Science Standards (NGSS) Presentation and assessment strategies that accommodate students' diverse needs while encouraging them to use communicative language: speaking, listening, reading, and writing. Ready-to-use templates and illustrations to enrich the textual discussion. Field-tested teaching strategies framed in the 5Es used in monolingual and bilingual classrooms. Reflection exercises that enhance teacher instructional decision-making. Use this timely resource to build students' science and language skills simultaneously while helping them find the joy in learning. This book is timely, informative, and accessible to the practitioner. As an administrator, I would love to use this resource with our staff as a way to generate dialogue around the NGSS and the implementation of science as the content for language arts integration.

Thelma A. Davis, Principal, Clark County School District, Las Vegas, NV

The book's major strengths are taking multiple teaching strategies that are proven to be beneficial for English learners and putting them together in an easy-to-understand format, allowing the teacher a view of what a lesson should look like, as well as numerous ready-made lessons to follow.
