Grammatical Inference: Algorithms and Applications Pieter Adriaans, Henning Fernau, Menno van Zaanen, 2002-09-11. The Sixth International Colloquium on Grammatical Inference ICGI2002 was held in Amsterdam on September 23-25th 2002. ICGI2002 was the sixth in a series of successful biennial international conferences on the area of grammatical inference. Previous meetings were held in Essex U.K., Alicante Spain, Montpellier France, Ames Iowa USA, Lisbon Portugal. This series of meetings seeks to provide a forum for the presentation and discussion of original research on all aspects of grammatical inference. Grammatical inference, the process of inferring grammars from given data, is a field that not only is challenging from a purely scientific standpoint but also finds many applications in real world problems. Despite the fact that grammatical inference addresses problems in a relatively narrow area, it uses techniques from many domains and is positioned at the intersection of a number of different disciplines. Researchers in grammatical inference come from fields as diverse as machine learning, theoretical computer science, computational linguistics, pattern recognition, and artificial neural networks. From a practical standpoint, applications in areas like natural language acquisition, computational biology, structural pattern recognition, information retrieval, text processing, data compression, and adaptive intelligent agents have either been demonstrated or proposed in the literature. The technical program included the presentation of 23 accepted papers out of 41 submitted. Moreover, for the first time, a software presentation was organized at ICGI. Short descriptions of the corresponding software are included in these proceedings too.

Duin, Aurélio Campilho, Dick de Ridder, 2004-10-29 This volume contains all papers presented at SSPR 2004 and SPR 2004 hosted by the Instituto de Telecomunicac oes Instituto Superior T ecnico Lisbon Portugal August 18 20 2004 This was the fourth time that the two workshops were held back to back The SSPR was the tenth International Workshop on Structural and Synt ic Pattern Recognition and the SPR was the fth International Workshop on Statistical Techniques in Pattern Recognition These workshops have traditi ally been held in conjunction with ICPR International Conference on Pattern Recognition and are the major events for technical committees TC2 and TC1 respectively of the International Association for Pattern Recognition IAPR The workshops were closely coordinated being held in parallel with plenary talks and a common session on hybrid systems This was an attempt to resolve the dilemma of how to deal with the need for narrow focuss specialized workshops yet accommodate the presentation of new theories and techniques that blur the distinction between the statistical and the structural approaches A total of 219 papers were received from many countries with the subm sion and reviewing processes being carried out separately for each workshop A total of 59 papers were accepted for oral presentation and 64 for posters In dition four invited speakers presented informative talks and overviews of their research They were Alberto Sanfeliu from the Technical University of Cata nia Spain Marco Gori from the University of Siena Italy Nello Cristianini from the University of California USA and Erkki Oja from Helsinki University of Technology Finland winner of the 2004 Pierre Devijver Award

Syntactic And Structural Pattern Recognition - Theory And Applications Horst Bunke, Alberto Sanfeliu, 1990-01-01 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read

individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book
