Reinforced Concrete Structures** Won-Kee Hong, 2023-01-11 Artificial Neural Network based Optimized Design of
Reinforced Concrete Structures introduces AI based Lagrange optimization techniques that can enable more rational
engineering decisions for concrete structures while conforming to codes of practice It shows how objective functions
including cost CO2 emissions and structural weight of concrete structures are optimized either separately or simultaneously
while satisfying constraining design conditions using an ANN based Lagrange algorithm Any design target can be adopted as
an objective function Many optimized design examples are verified by both conventional structural calculations and big
datasets Uniquely applies the new powerful tools of AI to concrete structural design and optimization Multi objective
functions of concrete structures optimized either separately or simultaneously Design requirements imposed by codes are
automatically satisfied by constraining conditions Heavily illustrated in color with practical design examples The book suits
undergraduate and graduate students who have an understanding of collegelevel calculus and will be especially beneficial to
engineers and contractors who seek to optimize concrete structures *Manual of Geology* James Dwight Dana, 1895
