Malatesha Joshi, P.G. Aaron, 2013-05-13 Until about two decades ago the study of writing systems and their relationship to literacy acquisition was sparse and generally modeled after studies of English language learners This situation is now changing As the worldwide demand for literacy continues to grow researchers from different countries with different language backgrounds have begun examining the connection between their writing systems and literacy acquisition This text which derives from a NATO sponsored conference on orthography and literacy brings together the research of 70 scholars from across the world the largest assemblage of such experts to date Their findings are grouped into three parts as follows Part I Literacy Acquisition in Different Writing Systems describes the relationship between orthography and literacy in twenty five orthographic systems This section serves as a handy reference source for understanding the orthographies of languages as diverse as Arabic Chinese English Icelandic Kannada and Kishwahili Part II Literacy Acquisition From a Cross Linguistic Perspective makes direct comparisons of literacy acquisition in English and other orthographic systems The overall conclusion that emerges from these eight chapters is that the depth of an orthographic system does influence literacy acquisition primarily by slowing down the acquisition of reading skills Even so studies show that dyslexic readers can be found across all orthographic systems whether shallow or deep which shows that dyslexia also has internal cognitive and biological components Part III Literacy Acquisition Instructional Perspectives explores literacy acquisition from

developmental and instructional perspectives and ends with a look into the future of literacy research This Handbook is appropriate for scholars researchers and graduate students in such diverse fields as cognitive psychology psycholinguistics literacy education English as a second language and communication disorders [The Oxford Handbook of Persian Linguistics](#) Anousha Sedighi,Pouneh Shabani-Jadidi,2018-08-02 This handbook offers a comprehensive overview of the field of Persian linguistics discusses its development and captures critical accounts of cutting edge research within its major subfields as well as outlining current debates and suggesting productive lines of future research Leading scholars in the major subfields of Persian linguistics examine a range of topics split into six thematic parts Following a detailed introduction from the editors the volume begins by placing Persian in its historical and typological context in Part I Chapters in Part II examine topics relating to phonetics and phonology while Part III looks at approaches to and features of Persian syntax The fourth part of the volume explores morphology and lexicography as well as the work of the Academy of Persian Language and Literature Part V language and people covers topics such as language contact and teaching Persian as a foreign language while the final part examines psycho neuro and computational linguistics The volume will be an essential resource for all scholars with an interest in Persian language and linguistics
