*POF - Polymer Optical Fibers for Data Communication* Olaf Ziemann, Jürgen Krauser, Peter E. Zamzow, Werner Daum, 2013-03-09 Optical information and data transmission has been an integral part of the economic life for many years The demand for ever increasing transmission rates a high horizon of expectations and the expansion of pan European networks led to a boom in glass fiber technologies Using the physical

properties of glass fibers for transmitting high data rates while simultaneously bridging long distances is the main objective here. As a result of this development, the technical and economical allocation of the so-called last mile and short distance in house transmission to the subscriber's desk inside a building has gained much significance. Existing copper networks whose utilization ratio is constantly improved by technical upgrading are used here today. POF or Polymer Optical Fiber now provides us with another interesting new and economical transmission element for this particular field of applications. While the technology has already been developed in the seventies, no economical system solutions existed until late in the nineties. But now that transmitter and receiver modules in the visible wave length range 400-800 nm are available at reasonable prices, the situation is different. The first technical and economical breakthrough was made in the automotive industry in 1998 with the D2B and with Most in the year 2000 respectively. The first optical fiber systems are now successfully used in high comfort up market car models. Providing fast and safe connections is one of NEXANS's main objectives.

Wireless Wars  
Jonathan Pelson, 2021-09-28 A 2024 US AIR FORCE LEADERSHIP LIBRARY BOOK NATIONAL INDIE EXCELLENCE AWARDS WINNER TECHNOLOGY

As the world rolls out transformational 5G services, it has become increasingly clear that China may be able to disrupt or even access the wireless networks that carry our medical, financial, and even military communications. This insider story from a telecommunications veteran uncovers how we got into this mess and how to change the outcome. In *Wireless Wars: China's Dangerous Domination of 5G and How We're Fighting Back*, author Jon Pelson explains how America invented cellular technology, taught China how to make the gear, and then handed them the market. Pelson shares never-before-told stories from the executives and scientists who built the industry and describes how China undercut and destroyed competing equipment makers, freeing themselves to export their nation's network gear and their surveillance state. He also reveals China's successful program to purchase the support of the world's leading political, business, and military figures in their effort to control rival nations' networks. What's more, Pelson draws on his lifelong experience in the telecommunications industry and remarkable access to the sector's leaders to reveal how innovative companies can take on the Chinese threat and work with counterintelligence and cybersecurity experts to prevent China from closing the trap. He offers unparalleled insights into how 5G impacts businesses, national security, and you. Finally, *Wireless Wars* proposes how America can use its own unique superpower to retake the lead from China. This book is about more than just 5G wireless services which enable self-driving cars, advanced telemedicine, and transformational industrial capabilities. It's about the dangers of placing our most sensitive information into the hands of foreign companies who answer to the Chinese Communist Party. And it's about the technology giant that China is using to project its power around the world. Huawei, a global super company that has surged from a local vendor to a 120 billion a year behemoth in just a few years. For anyone curious about the hottest issue at the intersection of technology and geopolitics, *Wireless Wars* offers an immersive crash course and an unforgettable read.
