Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian

jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes. The book highlights commonalities, consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters. Although the analysis indicates a network of policy and practice issues warranting further consideration, the diverse nature of Canadian science education makes simple identification of causal relationships elusive. Canada has a reputation for strong science achievement. However, there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education. This book fills that gap by presenting a thorough description of science education at the provincial/territorial level as well as a more holistic description of pressing issues for Canadian science education.

International Conference on Education and Management Science (ICEMS2014), 2014-09-24. 2014 International Conference on Education and Management Science. ICEMS2014 will be held in Beijing, China, on August 19-20, 2014. The main purpose of this conference is to provide a common forum for researchers, scientists and students from all over the world to present their recent findings, ideas, developments and application in the border areas of Education and Management Science. It will also report progress and development of methodologies, technologies, planning and implementation tools and standards in information systems. Education is an internal topic. It is a process of delivering knowledge in a basic meaning. Humans are hard to define the actual definition of education. But it is the key point for our society to step forward. Management science is the discipline that adapts the scientific approach for problem solving to help managers making informed decisions. The goal of management science is to recommend the course of action that is expected to yield the best outcome with what is available.

Socio-Life Science and the COVID-19 Outbreak. Makoto Yano, Fumihiko Matsuda, Anavaj Sakuntabhai, Shigeru Hirota, 2021-11-30. This open access book presents the first step towards building socio life science, a field of science investigating humans in such a way that both social and life scientific factors are integrated. Because humans are both living and social creatures, a human action can never be understood fully without knowing both the biological traits of a person and the social/scientific environments in which he exists. With this consideration, the editors of this book have initiated a research project promoting a deeper and more integrated understanding of human behavior and human health. This book aims to show what can and could be achieved through our interdisciplinary project. One important product is the newly formed three-party collaboration between Pasteur Institute, Kyoto University and the Research Institute of Economy, Trade and Industry. Covering many different fields including medicine, epidemiology, anthropology, economics, sociology, demography, geography and policy, researchers in these institutes and many others present their studies on the COVID-19 pandemic. Although based on different methodologies, the studies show the importance of behavioral change and governmental policy in the fight against a huge pandemic. The book explains the unique genome cohort panel data that the project builds to study social and life scientific aspects of humans.
