Contract farming, productivity and fertilizer usage: Empirical evidence from specialty crop production Mishra, Ashok K., Kumar, Anjani, Joshi, Pramod Kumar, D'Souza, Alwin, Tripathi, Gaurav, 2018-11-14 This study investigates the impact of contract farming CF in baby corn production on yield irrigation costs fertilizer costs and usage of chemical fertilizer We find that adoption of CF by baby corn smallholders after controlling for characteristics of both control and treatment groups leads to higher yields and lower spending on fertilizers and irrigation Additionally CF in baby corn farming leads to a reduction in the use of chemical fertilizers Urea and DAP Thus CF intervention benefits the livelihood of smallholders reduces environmental degradation and reduces stress on groundwater without compromising yield Official Gazette of the United States Patent and Trademark Office ,2004

Potassium Solubilizing Microorganisms for Sustainable Agriculture Vijay Singh Meena, Bihari Ram Maurya, Jay Prakash Verma, Ram Swaroop Meena, 2016-06-27 The potassium solubilizing microorganisms KSMs are a rhizospheric microorganism which solubilizes the insoluble potassium K to soluble forms of K for plant growth and yield K solubilization is carried out by a large number of saprophytic bacteria *Bacillus mucilaginosus* *B. edaphicus* *B. circulans* *Acidithiobacillus ferrooxidans* *Paenibacillus* spp and fungal strains *Aspergillus* spp and *Aspergillus terreus* Major amounts of K containing minerals muscovite orthoclase biotite feldspar illite mica are present in the soil as a fixed form which is not directly taken up by the plant Nowadays most of the farmers use injudicious application of chemical fertilizers for achieving maximum productivity However the KSMs are most important microorganisms for solubilizing fixed form of K in soil system The KSMs are an indigenous rhizospheric microorganism which show effective interaction between soil plant

systems The main mechanism of KSMs is acidolysis chelation exchange reactions complexolysis and production of organic acid According to the literature currently negligible use of potassium fertilizer as chemical form has been recorded in agriculture for enhancing crop yield Most of the farmers use only nitrogen and phosphorus and not the K fertilizer due to unawareness that the problem of K deficiency occurs in rhizospheric soils The K fertilizer is also costly as compared to other chemical fertilizers **WASTES 2015 - Solutions, Treatments and Opportunities** Candida Vilarinho, Fernando

Biostimulants in Agriculture II: Towards a Sustainable Future Maurizio Ruzzi, Giuseppe Colla ,Youssef Roupael,2024-06-11 Modern agriculture needs to review and broaden its practices and business models by integrating opportunities coming from different adjacent sectors and value chains including the bio based industry in a fully circular economy strategy Searching for new tools and technologies to increase crop productivity under optimal and sub optimal conditions and to improve resources use efficiency is crucial to ensure food security while preserving soil quality microbial biodiversity and providing business opportunities for farmers Biostimulants based on microorganisms or organic substances obtained from renewable materials represent a sustainable efficient technology or complement to synthetic counterparts to improve nutrient use efficiency and secure crop yield stability Under the new European Union Regulation 2019 1009 plant biostimulants were defined based on four agricultural functional claims as follows Plant biostimulants are products that stimulate plant nutrition processes independently of the product s nutrient content with the sole aim of improving one or more of the following characteristics of the plant and or the plant rhizosphere 1 nutrient use efficiency 2 tolerance resistance to a biotic stress 3 quality characteristics or 4 availability of confined nutrients in the soil or rhizosphere Many diverse natural substances and chemical derivatives of natural or synthetic compounds as well as beneficial microorganisms are cataloged as plant biostimulants including i humic substances ii plant or animal based protein hydrolysates iii macro and micro algal extracts iv silicon v arbuscular mycorrhizal fungi AMF and vi plant growth promoting rhizobacteria PGPR belonging to the Azotobacter Azospirillum and Rhizobium genera Managing oil palm landscapes Lesley Potter,2015-05-26 This study comprises a review of oil palm development and management across landscapes in the tropics Seven countries have been selected for detailed analysis using surveys of the current literature mainly spanning the last fifteen years Indonesia and Malaysia are the obvious leaders in terms of area planted and levels of production and export but also in literature generated on social and environmental challenges In Latin America Colombia is the dominant producer with oil palm expanding in disparate landscapes with a strong focus on palm oil based biodiesel and small scale growers and companies in Peru and Brazil offer contrasting ways of inserting oil palm into the Amazon Nigeria and Cameroon represent African nations with traditional groves and old plantations in which foreign land grabs to establish new oil palm have recently occurred Federal Register ,2014 **A review of the Ghana Planting for Food and Jobs program: 2017-2020:**

Implementation, impact, and further analysis Pauw, Karl, 2021-04-13 This report examines the evolution of farm input subsidy programs in Ghana with a focus on the Planting for Food and Jobs PFJ initiative which was introduced in 2017 and replaced the Fertilizer Subsidy Program FSP that was launched in 2008 A review of PFJ implementation reports and other official data sources reveal that information on general program features such as beneficiary numbers subsidized input quantities and program budget is readily available and useful for understanding program design and implementation National crop production estimates are also reported annually and these provide evidence of rapid output growth in the agricultural sector especially within the cereals subsector However the implementing agency the Ministry of Food and Agriculture MoFA lacks a system for closely monitoring and reporting PFJ program impacts at farm level Consequently most of the published information on the marginal contribution of PFJ to national crop output is based on simulations which make strong assumptions about seeding rates fertilizer use by crop and input use efficiency on beneficiary farms With this drawback in mind these simulations show that PFJ contributed substantially to crop output growth a result which is not implausible considering the quantities of inputs provided but one that requires further on farm validation Recommendations are offered around beneficiary targeting interpretation of employment impacts and the need for regular monitoring of farm level impacts all of which will help improve transparency of the program
