Despeckle Filtering for Ultrasound Imaging and Video Christos P. Loizou, Constantinos S. Pattichis, 2015-08-01 In ultrasound imaging and video visual perception is hindered by speckle multiplicative noise that degrades the quality Noise reduction is therefore essential for improving the visual observation quality or as a pre processing step for further automated analysis such as image video segmentation texture analysis and encoding in ultrasound imaging and video The goal of the first book book 1 of 2 books was to introduce the problem of speckle in ultrasound image and video as well as the theoretical background algorithmic steps and the Matlab™ for the following group of despeckle filters linear despeckle filtering non linear despeckle filtering diffusion despeckle filtering and wavelet despeckle filtering The goal of this book book 2 of 2 books is to demonstrate the use of a comparative evaluation framework based on these despeckle filters introduced on book 1 on cardiovascular ultrasound image and video processing and analysis More specifically the despeckle filtering evaluation

framework is based on texture analysis image quality evaluation metrics and visual evaluation by experts This framework is applied in cardiovascular ultrasound image video processing on the tasks of segmentation and structural measurements texture analysis for differentiating between two classes i e normal vs disease and for efficient encoding for mobile applications It is shown that despeckle noise reduction improved segmentation and measurement of tissue structure investigated increased the texture feature distance between normal and abnormal tissue improved image video quality evaluation and perception and produced significantly lower bitrates in video encoding Furthermore in order to facilitate further applications we have developed in MATLAB™ two different toolboxes that integrate image IDF and video VDF despeckle filtering texture analysis and image and video quality evaluation metrics The code for these toolsets is open source and these are available to download complementary to the two monographs
