- ▶ To find LES skin type, add up the four numbers (on the chart to the right) that correspond to the grandparents' ethnicities on the maternal and paternal sides. Divide that total number by four to find the LES score.
- ▶ A higher LES score means a higher risk with treatments. No matter what, there is always risk with any treatment that requires healing. A higher LES score comes with a higher risk of adverse reactions to resurfacing treatments.
- ▶ Knowing ancestral history will allow you as a provider to better anticipate how skincare or treatments may affect your patients' skin. Research into family history can reveal more about skin than is on the surface.
