

The Learning Perspective (Behaviourist Approach)

Origins and History:

- The learning perspective was influenced by the idea of **empiricism** (*knowledge comes from the environment via the senses because a human being is a "tabula rasa"—blank slate—at birth*) and the **physical sciences** (*which emphasize scientific and objective methods of investigation*).
- Behaviourists such as Pavlov, Watson, Skinner, and Thorndike attempt to explain all behaviour as a product of learning.
- Watson pioneered the movement in 1913 with his article "Psychology as the Behaviourist Views It"
- Behaviourism dominated psychology until the 1950s when **ethologists** (*animal behaviourists*) and cognitive psychologists began to criticize its assumptions and methods.

Basic Assumptions:

1. The majority of all behaviour is learned from the environment after birth and thus:
 - a. psychology should investigate the laws and products of learning
 - b. behaviour is determined by the environment
 - c. Freewill is an illusion as humans are just a collection of past learning experiences.
2. Only observable behaviour should be studied if psychology is to be an objective science, since we cannot see into people's minds, assuming that if one is asked about his or her thoughts he or she may lie, not know, or be mistaken. ← *Approach still used by learning theorists.*
3. Subjectivity should be eliminated from psychology
4. Stimulus-response associations are the building blocks of all behaviour.
5. Laws of learning are the same for all species and can be seen in any environment.

Key Concepts:

- **Classical Conditioning: Learning through association.**
 1. *Pavlov*- Classically conditioned a dog to salivate when it heard a bell. Dogs naturally salivate (unconditioned response) when presented with food (unconditioned stimulus). Pavlov began to ring a bell (conditioned stimulus) before presenting the dog with food. As the food naturally elicited saliva, the

treatment are not benefitted by current treatments and many don't even seek them. Equine assisted therapy is a novel experiential treatment approach showing significant promise for adults, children, and youth across a range of mental health problems. These treatments use a horse or horses to facilitate communication and mindful awareness of thoughts, emotions, and behaviors in an experientially oriented approach via groundwork or riding. Interactions with horses have shown to foster emotional regulation, self-confidence, reflection, and insight by which well-being is facilitated. The current book describes the rationale for these treatments, adds to the knowledge about recent progress in applying them to posttraumatic stress disorder, PTSD, anxiety, attention deficit hyperactivity disorder, ADHD, and more, and analyzes the nature of the bonding between humans and equines, which makes these relationships so therapeutic and healing.

The Original Buddhist Psychology Beth Jacobs, Ph.D., 2017-06-27 Drawing on decades of experience, a psychotherapist and Zen practitioner makes the Abhidharma, the original psychological system of Buddhism, accessible to a general audience for the first time. The Abhidharma, one of the three major text collections of the original Buddhist canon, explores the critical juncture of Buddhist thought and the therapeutic aspects of the religion and meditation. It frames the psychological system of Buddhism, explaining the workings of reality and the nature of the human mind. Composed of detailed matrixes and lists that outline the interaction of consciousness and reality, the Abhidharma explores the essence of perception and experience and the reasons and methods behind mindfulness and meditation. Because of its complexity, the Abhidharma has traditionally been reserved only for academic or monastic study; now, for the first time, clinical psychologist Beth Jacobs makes this dynamic important text and its teachings available to general readers using practical explanation, personal stories, and vivid examples to gently untangle the technical aspects of the Abhidharma. Jacobs' work illuminates this classic of Buddhist thought, highlighting the ways it can broaden and deepen our experience of the human psyche and offering profound insights into
