Big idea

Evolution

Q: What is natural selection?

16.1 What patterns of biodiversity did Darwin observe aboard the *Beagle*?

WHAT I KNOW

SAMPLE ANSWER: On each island that Darwin visited, he saw different species of plants and animals.

WHAT I LEARNED

SAMPLE ANSWER: Darwin noticed that different, yet similar, species inhabited separated, but similar, habitats around the globe. Also, different, yet related, species often occupied different habitats within a local area.

16.2 How did other scientists' work help Darwin develop his theory of natural selection?

SAMPLE ANSWER: Other scientists did research on how organisms inherited different traits.

SAMPLE ANSWER: Hutton and Lyell concluded that Earth is extremely old. Lamarck suggested that species are not fixed. Malthus reasoned larger populations would deplete resources.

16.3 What is Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Organisms that are best adapted to their environment survive longer and have more offspring.

SAMPLE ANSWER: Natural selection is the process by which organisms with variations most suited to their local environment survive and leave more offspring. Over time, beneficial traits accumulate in a population.

16.4 What are the main lines of scientific evidence that support Darwin's theory of evolution by natural selection?

SAMPLE ANSWER: Fossils show how organisms have changed over time.

SAMPLE ANSWER: Biogeography, fossils, homologous structures, similarities in embryological development, the universal genetic code, homologous molecules, and field studies provide evidence of evolution.

Francis, 2006-12-30 In 1859 an amateur British naturalist published a book of

findings that shook the scientific community to its core and changed the structure of religion and science as we know them. The product of over 20 years of research, *The Origin of Species* challenged the popular belief that species could not evolve and argued that species can adapt to their environment and develop accordingly. Although other scientists had observed some of the phenomena that Charles Darwin addressed, he was the first to theorize that natural selection and later evolution were viable explanations for the origins of life. The implications of Darwin's findings still reverberate today in the classroom, in the courtroom, and at the highest legislative levels. Lively thematic chapters explore how Darwin came to the conclusions published in *The Origin of Species* and in later works such as *The Descent of Man* from his early years at Cambridge to his observations of species on the HMS Beagle voyages through the 20 years of research that culminated in *Origin*. Also included is an insightful discussion of Darwin's impact as it is felt today from movies and popular culture to the current Intelligent Design controversy. Biographies of influential figures, primary source letters and selections from *Origin*, a glossary of terms, and an extensive annotated bibliography round out this accessible work.

Darwin's Cathedral David Sloan Wilson, 2024-05-31

A study examining the connection between religious faith and human evolution. Thoughtful and provocative, Wilson turns to religion, which he claims can be explained only by group selection. According to Wilson, a religion is the human equivalent of a pack of lions: by cooperating as a group, people attain benefits beyond their reach as individuals. *Times Literary Supplement* Book of the Year. One of the great intellectual battles of modern times is between evolution and religion. Until now, they have been considered completely irreconcilable theories of origin and existence. David Sloan Wilson's *Darwin's Cathedral* takes the radical step of joining the two in the process, proposing an evolutionary theory of religion that shakes both evolutionary biology and social theory at their foundations. The key, argues Wilson, is to think of society as an organism, an old idea that has received new life based on recent developments in evolutionary biology. If society is an organism, can we then think of morality and religion as biologically and culturally evolved adaptations that enable human groups to function as single units rather than mere collections of individuals? Wilson brings a variety of evidence to bear on this question from both the biological and social sciences. From Calvinism in sixteenth-century Geneva to Balinese water temples, from hunter-gatherer societies to urban America, Wilson demonstrates how religions have enabled people to achieve by collective action what they never could do alone. He also includes a chapter considering forgiveness from an evolutionary perspective and concludes by discussing how all social organizations, including science, could benefit by incorporating elements of religion. Religious believers often compare their communities to single organisms and even to insect colonies. Astoundingly, Wilson shows that they might be literally correct. Intended for any educated reader, *Darwin's Cathedral* will change forever the way we view the relations among evolution, religion, and human society. As always, Wilson writes well and clearly, and in a stimulating and provocative style. The book is interesting and important, and there can be no higher praise. I applaud the approach taken by Wilson and I urge you to read *Darwin's Cathedral*. Science. Wilson's book is more than just an

Science Fraud: Darwin's Plagiarism of Patrick Matthew's Theory Mike Sutton,2023 Patrick Matthew in 1831 originated the complete theory of evolution by natural selection in his book On Naval Timber and Arboriculture and did so before Charles Darwin and Alfred Wallace claimed to independently replicate it in 1858 Unjustly and against the Arago convention on priority a ruling that gives origination of any science theory to the first to publish Matthew has been illicitly denied his priority on the grounds he never influenced anyone with his breakthrough Today Big Data research has uncovered Darwin's science fraud by plagiarism revealing evidence which proves beyond all reasonable doubt that he and Alfred Wallace both independently plagiarised the theory of evolution by natural selection from Patrick Matthew Books have been newly unearthed in the publication record to show that at least 30 people cited Matthew's work in published literature before 1858 and that several were known influencers of Darwin's and Wallace's work in the field Additionally several people in Darwin's and Wallace's social circles were first to be second into print using original terms coined by Matthew in his bombshell breakthrough book This book reveals all the newly unearthed data and essentially explains it alongside the deplorable treatment of Patrick Matthew in scholarly historical context Dr Mike Sutton further reveals using social science participatory observation methods and experimental results how members of the so called Darwin Industry enabled and facilitated by the deliberate publication of falsehoods and other grossly misleading editing on Wikipedia have disgracefully worked to re bury these newly unearthed facts by means of knee jerk blind sight ignorant rejection blatant and deliberate fact denial censorship persistent and serious workplace harassment obscene social media abuse poison pen emails lies

mischievous misrepresentation and repeat research plagiarism *The Philosophy of Evolutionary Theory* Elliott Sober, 2024-02-08 Natural selection mutation and adaptation are well known and central topics in Darwin's theory of evolution and in the 20th and 21st century theories which grew out of it but many other important topics are used in evolutionary biology that raise interesting philosophical questions In this book Elliott Sober analyses a much larger range of topics including fitness altruism common ancestry chance taxonomy phylogenetic inference operationalism reductionism conventionalism null hypotheses and default reasoning instrumentalism versus realism hypothetico deductivism essentialism falsifiability the principle of parsimony the principle of the common cause causality determinism versus indeterminism sensitivity to initial conditions and the knowability of the past Sober's clear philosophical analyses of these key concepts arguments and methods of inference will be valuable for all readers who want to understand evolutionary biology in both its Darwinian and its contemporary forms **Darwin's Argument by Analogy** Roger M. White, M. J. S. Hodge, Gregory Radick, 2021-11-04 In *On the Origin of Species* 1859 Charles Darwin put forward his theory of natural selection Conventionally Darwin's argument for this theory has been understood as based on an analogy with artificial selection But there has been no consensus on how exactly this analogical argument is supposed to work and some suspicion too that analogical arguments on the whole are embarrassingly weak Drawing on new insights into the history of analogical argumentation from the ancient Greeks onward as well as on in depth studies of Darwin's public and private writings this book offers an original perspective on Darwin's argument restoring to view the intellectual traditions which Darwin took for granted in arguing as he did From this perspective come new appreciations not only of Darwin's argument but of the metaphors based on it the range of wider traditions the argument touched upon and its legacies for science after the Origin
