Mash,2008-03-21 The need for evidence based practice in mental health services is becoming clearer by the day and until recently the trend of emphasizing services with supporting empirical evidence has been almost exclusively limited to a focus on treatment options A Guide to Assessments That Work fills a void in the professional literature by addressing the critical role that assessment plays in providing evidence based mental health services To optimize its usefulness to readers this volume addresses the assessment of the most commonly encountered disorders or conditions among children adolescents adults older adults and couples Strategies and instruments for assessing mood disorders anxiety disorders couple distress and sexual problems health related problems and many other conditions are also covered in depth With a focus throughout on assessment instruments that are feasible psychometrically sound and useful for typical clinical requirements a rating system has been designed to provide evaluations of a measure's norms reliability validity and clinical utility Standardized tables summarize this information in each chapter providing essential information on the most scientifically sound tools available for a range of assessment needs Using the tools provided in A Guide to Assessments That Work readers can at a glance determine the possible suitability and value of each instrument for their own clinical purposes This much needed resource equips readers with the knowledge necessary for conducting the best evidence based mental health assessments currently possible **Animal and Translational Models for CNS Drug Discovery** Robert A. McArthur,Franco Borsini,2008-11-27 Animal and Translational Models for CNS Drug Discovery combines the experience of academic clinical and pharmaceutical neuroscientists in a unique collaborative approach to provide a greater understanding of the relevance of animal models of neuropsychiatric disorders and their role

as translational tools for the discovery of CNS drugs being developed for the treatment of these disorders. The focus of this three volume series of essays is to present a consensual picture of the translational value of animal models from leading experts actively involved in the use of animal models for understanding fundamental neurobiology of CNS disorders and the application of this knowledge to CNS drug discovery and clinical investigators involved in clinical trials, drug development and eventual registration of novel pharmaceuticals. Each volume of the Animal and Translational Models for CNS Drug Discovery series is dedicated to the development and use of animal models in key therapeutic areas in psychiatric, neurologic and reward deficit disorders. Each volume has introductory chapters expressing the view of the role and relevance of animal models for CNS drug discovery and development from the perspective of a) academic basic neuroscientific research, b) applied pharmaceutical drug discovery and development, and c) issues of clinical trial design and regulatory agencies' limitations. Each volume examines the rationale, use, robustness and limitations of animal models in relevant therapeutic areas and discusses the use of animal models for target identification and validation. The clinical relevance of animal models is discussed in terms of major limitations in cross species comparisons, clinical trial design of drug candidates and how clinical trial endpoints could be improved. The aim of this series of volumes on Animal and Translational Models for CNS Drug Discovery is to identify and provide common endpoints between species that can serve to inform both the clinic and the bench with the information needed to accelerate clinically effective CNS drug discovery. Provides clinical, academic, government and industry perspectives fostering integrated communication between principle participants at all stages of the drug discovery process. Critical evaluation of animal and translational models improving transition from drug discovery and clinical development. Emphasizes what results mean to the overall drug discovery process. Explores issues in clinical trial design and conductance in each therapeutic area. Each volume is available for purchase individually.

Animal and Translational Models for CNS Drug Discovery: Psychiatric Disorders Robert A. McArthur, Franco Borsini, 2008-11-17. Psychiatric Disorders is written for researchers in both academia and the pharmaceutical industry who use animal models in research and development of drugs for psychiatric disorders such as anxiety, obsessive compulsive disorder, depression, schizophrenia, bipolar disorder, ADHD and autistic spectrum disorder. Psychiatric Disorders has introductory chapters expressing the view of the role and relevance of animal models for drug discovery and development for the treatment of psychiatric disorders from the perspective of a) academic basic neuroscientific research, b) applied pharmaceutical drug discovery and development, and c) issues of clinical trial design and regulatory agencies' limitations. Each volume examines the rationale, use, robustness and limitations of animal models in each therapeutic area covered and discusses the use of animal models for target identification and validation. The clinical relevance of animal models is discussed in terms of major limitations in cross species comparisons, clinical trial design of drug candidates and how clinical trial endpoints could be improved. The aim of this series of volumes on Animal and Translational Models for CNS Drug Discovery is to identify and provide common endpoints between species that can serve to

inform both the clinic and the bench with the information needed to accelerate clinically effective CNS drug discovery This is the first volume in the three volume set *Animal and Translational Models for CNS Drug Discovery* 978 0 12 373861 5 and is also available for purchase individually Provides clinical academic government and industry perspectives fostering integrated communication between principle participants at all stages of the drug discovery process Critical evaluation of animal and translational models improving transition from drug discovery and clinical development Emphasizes what results mean to the overall drug discovery process Explores issues in clinical trial design and conductance in each therapeutic area *Psychiatric Disorders* is available for purchase individually
