Simms, 2005-12-02 In 1978 when the book Living Systems was published it contained the prediction that the sciences that were concerned with the biological and social sciences would in the future be stated as rigorously as the hard sciences that study such nonliving phenomena as temperature distance and the interaction of chemical elements Principles of Quantitative Living Systems Science the first of a planned series of three books begins an attempt to fulfill that prediction The view that living things are similar to other parts of the physical world differing only in their complexity was explicitly stated in the early years of the twentieth century by the biologist Ludwig von Bertalanffy His ideas could not be published until the end of the war in Europe in the 1940s Von Bertalanffy was strongly opposed to vitalism the theory current among biologists at the time that life could only be explained by recourse to a vital principle or God He c sidered living things to be a part of the natural order systems like atoms and molecules and planetary systems Systems were described as being made up of a number of interrelated and interdependent parts but because of the interrelations the total system became more than the sum of those parts These ideas led to the development of systems movements in both Europe and the United States that included not only biologists but scientists in other fields as well Systems societies were formed on both continents Working with Midpoints Kathy Allan, 2024-01-01 A simple yet often overlooked astrological technique. The information that midpoints provide is astonishing they can mirror what is going on in the world in many cases providing the missing link that explains what is really happening when traditional astrology fails Veteran astrologer and author Kathy Allan has crafted a new manual that will teach readers to hone their basic chart reading and predictive skills through working with midpoints long considered a specialized topic in the field of astrology Initially inspired by the astrology classic Working with Astrology by Charles Harvey and Mike Harding Allan wanted to create a more user friendly textbook Exercises are included at the end of each chapter After explaining what midpoints are and how to find them Allan uses in depth case studies that examine the lives and horoscopes of such cultural icons as Carl Jung Evangeline Adams and Stephen King demonstrating midpoints in action Allan shows us how to delineate transiting and solar arc midpoints as an aid to understanding events Adding midpoints to ingress eclipse and return charts adds detailed information that enables us to more accurately anticipate coming events Readers will learn all about occupied and unoccupied midpoints planetary axes the 360 and 90 degree dials plus how to contemplate and forecast future trends At last here is a systematic and engaging approach to working with midpoints The perfect companion volume to Allan s

acclaimed book on the Lunar Nodes Progress in Hydrogen Energy, Fuel Cells, Nano-Biotechnology and Advanced, **Bioactive Compounds** Carlton A. Mangathayaru, 2013 Designed to cover the core subject of pharmacognosy offered to undergraduate students of pharmacy this book presents the theoretical concepts in a lucid style Its in depth coverage of topics guintessential to the Indian plant drug sector makes the book unique as does its exposition on herbal cosmetics and quality control of herbal drugs The book abounds with a rich pedagogy that enables effortless recapitulation of the subject Outsider Scientists Oren Harman, Michael R. Dietrich, 2013-12-11 Outsider Scientists describes the transformative role played by outsiders in the growth of the modern life sciences Biology which occupies a special place between the exact and human sciences has historically attracted many thinkers whose primary training was in other fields mathematics physics chemistry linguistics philosophy history anthropology engineering and even literature These outsiders brought with them ideas and tools that were foreign to biology but which when applied to biological problems helped to bring about dramatic and often surprising breakthroughs This volume brings together eighteen thought provoking biographical essays of some of the most remarkable outsiders of the modern era each written by an authority in the respective field From Noam Chomsky using linguistics to answer questions about brain architecture to Erwin Schr dinger contemplating DNA as a physicist would to Drew Endy tinkering with Biobricks to create new forms of synthetic life the outsiders featured here make clear just how much there is to gain from disrespecting conventional boundaries Innovation it turns out often relies on importing new ideas from other fields Without its outsiders modern biology would hardly be recognizable
