

QUESTION

Fastest descent time The cycloid is the curve traced by a point on the rim of a rolling wheel. Imagine a wire shaped like an inverted cycloid (see figure). A bead sliding down this wire without friction has some remarkable properties. Among all wire shapes, the cycloid is the shape that produces the fastest descent time (see the Guided Project *The Amazing Cycloid* for more about this brachistochrone property). It can be shown that the descent time between any two points $0 \leq a \leq b \leq \pi$ on the curve is

$$\text{descent time} = \int_a^b \sqrt{\frac{1 - \cos t}{g(\cos a - \cos t)}} dt$$

, where g is the acceleration due to gravity, $t = 0$ corresponds to the top of the wire, and $t = \pi$ corresponds to the lowest point on the wire. (FIGURE CAN'T COPY) a. Find the descent time on the interval $[a, b]$ by making the substitution $u = \cos t$. b. Show that when $b = \pi$, the descent time is the same for all values of a ; that is, the descent time to the bottom of the wire is the same for all starting points.
