Guide To Research Techniques In Neuroscience:

Guide to Research Techniques in Neuroscience Matt Carter, Jennifer C. Shieh, 2015-02-27 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry using electrophysiology and high resolution optics A single topic can be studied using techniques from genetics imaging biochemistry or electrophysiology Therefore it can be daunting for young scientists or anyone new to neuroscience to learn how to read the primary literature and develop their own experiments This volume addresses that gap gathering multidisciplinary knowledge and providing tools for understanding the neuroscience techniques that are essential to the field and allowing the reader to design experiments in a variety of neuroscience disciplines Written to provide a hands on approach for graduate students postdocs or anyone new to the neurosciences Techniques within one field are compared allowing readers to select the best techniques for their own work Includes key articles books and protocols for additional detailed study Data analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide readers step by step through experiments
