Jeddi-Tehrani, Amir-Hassan Zarnani, Maria Laura Zenclussen, Marie-Pierre Piccinni, 2025-09-19 Reproductive biology is the mother of other areas in biology as Reproduction had been the main strategy of simple and higher organisms to evolve The utmost fitness in evolutionary tree is biological fitness in being beneficial for successful reproduction In this connection reproductive sciences have been the focus of many research programs Specifically reproductive immunology has received the attention of researchers more than ever This trend is largely due to the industrialization of societies the increase in the age of marriage and as a result the decrease in fertility rates On the other hand despite significant advances in the field of artificial reproductive technologies low success rate of embryo transfer is the main limiting factor for in vitro fertilization treatment Therefore understanding the immunological mechanisms of implantation and the adaptation of the immune cells of the pregnancy site which leads to the maternal immunological tolerance to fetal antigens is of utmost importance

Immunological alterations of the female reproductive tract commences from the first exposure to seminal plasma leading to molecular and cellular changes that increase the chance of conception and pregnancy through modulation of inflammatory responses and induction of paternal antigen specific regulatory T cells Steroid hormone directed decidualization of endometrium is the first step for embryo implantation and placental development which eventually leads to immunoregulation of the immune cells residing in the endometrium in favor of pregnancy Following placental development an extensive crosstalk begins among developing trophoblasts decidualized endometrial stromal cells and the decidual immune cells and establishes a unique triangle for induction of maternal immune tolerance All the processes of entire pregnancy are under the tight control of inflammation regulatory mechanisms While acute inflammation is a triggering mechanism of embryo implantation and parturition cell senescence associated with chronic inflammation in pregnancy related disorders such endometriosis chronic endometritis and hydrosalpinx is destructive and can lead to infertility or abortion
