Investigating Photosynthesis

- Jan van Helmont was a Belgian physician in the 1600's
 - Conducted experiments to find out how plants grow
 - He put a small seedling in a pot of soil, watered it for five years
 - He found out the tree then weighed about 75 kg, but the same mass as before
 - He concluded most of the increase in mass of the tree came from the water (he didn't know about carbon)
- Joseph Priestley was an English minister in the 1700's
 - He took a candle, placed a jar over it, and watched the candle go out
 - He found there was something in the air the plants
 - He then tried the experiment again with a live sprig of mint, waiting a few days, and then tried to relight the candle
 - The candle remained lighted for a while, why?
- Jan Ingenhousz was a Dutch scientist
 - He showed that the effect observed by Priestley (candle going out) occurred only when the plant was exposed to light
