These results are depicted in Figure 2. As shown, until the third year of life, the children in the *early intervention* group ($n = 21$) in the intervention, as compared with a waiting (no-treatment) group ($n = 21$) showed significant improvement in the number of the words in the child's lexical. These improvements were more pronounced for the children in the waiting group, as compared with the children in the intervention group, in the third year of life. These results indicated that the waiting
