Research published recently has identified an endogenous pathway for the release of nitric oxide from endothelial cells, which is termed the endothelial nitric oxide synthase (eNOS) pathway. This pathway is involved in the regulation of blood pressure, and its dysfunction is associated with hypertension. The eNOS pathway is a complex system that involves the conversion of L-arginine to L-citrulline and nitric oxide. The eNOS pathway is regulated by a number of factors, including shear stress, endothelial nitric oxide synthase (eNOS) expression, and eNOS activity. The eNOS pathway is a key component of the endothelial nitric oxide synthase (eNOS) pathway, which is involved in the regulation of blood pressure and vascular function.
