This is the completed version, which is completely filled out. Just print and send home with students.

## Static Electricity

Static electricity is the transfer of negatively charged particles between materials. Clothes sticking together when coming out of the dryer is an example of static electricity. Another example is lightning.

## Electromagnets

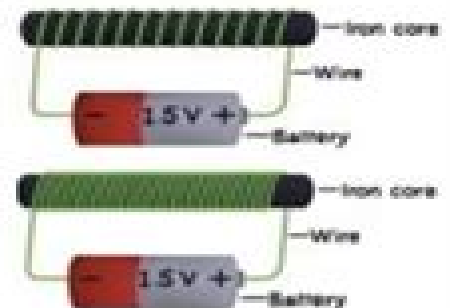

A current flowing through a wire creates a magnetic field. Wrapping a wire around metal containing iron and creating a closed circuit makes an **electromagnet**.

Items needed to make an electromagnet:

- battery
- wire
- nail (or other metal object containing iron)

You can change the strength of an electromagnet by:

- changing the number of coils
- reducing or increasing the current
- changing the size of the wire
- using a different iron core

Example: The bottom electromagnet has more strength because it has more coils.

## Electrical Energy Transformations
