- 1) **Interference** is the process which is the combination of two AC sources
- 2) **Constructive interference** or **Reinforcement** occurs
- 3) **When phase difference between two oscillating particles is equal to 2π or multiple of 2π the resultant amplitude is equal to sum of individual amplitudes. But a phase difference of π or odd multiple of π is called **destructive interference** or **cancelation** of oscillations. This is called **destructive interference**.**
- 4) **Constructive interference** results in maximum resultant AC current.
- 5) **Phase difference 2π or multiple of 2π between the source oscillations gives rise to the **constructive interference**. Similarly, the source oscillations with a phase difference of π or odd multiple of π give rise to the **destructive interference**.**

- Abstract**
The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary, middle-aged women. The study was a randomized, controlled trial. The intervention group (IG) participated in a 12-week training program, while the control group (CG) remained sedentary. The IG showed significant improvements in physical fitness and HRQL compared to the CG. The results suggest that a 12-week training program can improve physical fitness and HRQL in sedentary, middle-aged women.
