Environmental and Chemical Toxins and Psychiatric Illness James S. Brown, 2008-08-13 During the past 60 years the number of chemical disasters worldwide from military occupational and environmental sources has risen at an alarming rate. The profound controversy surrounding many chemicals makes objective analysis nearly impossible. Yet now more than ever with the daily exposure to a wide range of chemicals and the increased threat of chemical terrorism it is critical that we understand the role of chemicals in causing psychiatric illness. Unlike related books this remarkable reference is intended specifically for psychiatric applications and is thus the definitive sourcebook for the many professionals called on to respond to these events. This work stands alone as the first on this topic to be written by a psychiatrist and the first to bring together the military occupational and environmental exposures causing psychiatric illness including multiple chemical sensitivities, mass hysteria, radiation exposures, community stress reactions, and Gulf War and other syndromes. Unique highlights include: A summary of the reported psychiatric symptoms attributed to each chemical class: chemical weapons, pesticides, fumigants, metals, solvents, gases, PCBs, Agent Orange and other miscellaneous chemicals in tables for easy reference. We use personal care products, take prescription drugs, pump gasoline, drink alcohol, and spray insecticides as part of our everyday lives. Yet rarely do we realize that significant exposures to the chemicals described in this book, many of which we are exposed to in daily activities, can damage the central nervous system causing psychiatric illness. A comprehensive bibliography in every chapter of all the important material in English language medical journals and books that has appeared on this subject since the late 19th century. These bibliographies cover everything from the first published reports of the dangers of carbon disulfide in the French rubber industry, dangers that American medicine ignored for years, through more recent large scale chemical exposures that have serious long term consequences, e.g., Love Canal. The latest information about terrorist and military uses of chemical weapons of critical relevance in psychiatry today from World War I combatants exposed to chlorine, phosgene, mustard gas, arsenic, and cyanide to the first organophosphate or nerve gases such as tabun and sarin developed by the Germans before and during World War II and used by Iraq in the Gulf War and by a religious cult in the terrorist subway attacks in Tokyo and Matsumoto, Japan. Quite simply this book is a must have for psychiatric and medical professionals everywhere with extended appeal among laypersons such as environmental consumer advocates, attorneys, insurance professionals, industrial hygienists, disaster planners, and medical librarians. Quality in Design and Execution of Engineering Practice Lex A. Gunsteren, 2013-05-29 The quality your customers really need inevitably differs from the quality as prescribed in specifications rules and regulations The author's message is in short to be aware of this fact in all quality related issues Quality as required by fitness for purpose can be in conflict with quality according to prevailing specifications rules and regulations It is then in the interest of the buyer to agree with the supplier on desirable exemptions But often we can see that the supplier chooses the easy way out of just complying with the contract specifications without caring too much about the particular interests of the customer In the Damen Shipyards Group we try to induce a corporate culture of always paying attention to the interests of our customers and making serious efforts to serve those interests also when there is no contractual obligation to do so This book constitutes a welcome means to spread this word throughout the entire organisation I wholeheartedly recommend it to whoever wishes to be a genuine quality supplier From publisher's provided

Becker, 2024-05-31 I Remember one of French writer Georges Perec s most famous pieces consists of 480 numbered paragraphs each just a few short lines recalling a memory from his childhood The work has neither a beginning nor an end Nor does it contain any analysis But it nonetheless reveals profound truths about French society during the 1940s and 50s Taking Perec s book as its cue Telling About Society explores the unconventional ways we communicate what we know about society to others The third in distinguished teacher Howard Becker s best selling series of writing guides for social scientists the book explores the many ways knowledge about society can be shared and interpreted through different forms of telling fiction films photographs maps even mathematical models many of which remain outside the boundaries of conventional social science Eight case studies including the photographs of Walker Evans the plays of George Bernard Shaw the novels of Jane Austen and Italo Calvino and the sociology of Erving Goffman provide convincing support for Becker s argument that every way of telling about society is perfect for some purpose The trick is as Becker notes to discover what purpose is served by doing it this way rather than that With Becker s
