Small-Scale Urban Greening Angela Loder, 2020-03-02 Small scale urban greening projects are changing the urban landscape shifting our experience and understanding of greenspaces in our cities This book argues that including power dynamics symbolism and aesthetics in our understanding of the human relationship to urban nature can help us create places that nurture ecological and human health and promote successful and equitable urban communities Using an interdisciplinary approach to current research debates and new comparative case studies on community perceptions of these urban greening projects and policies this book explores how small scale urban greening projects can impact our sense of place health creativity and concentration while also being part of

a successful urban greening program Arguing that wildness emotion and sense of place are key components of our human nature relationship this book will be of interest to designers academics and policy makers A Companion to American Environmental History Douglas Cazaux Sackman, 2010-02-12 A Companion to American Environmental History gathers together a comprehensive collection of over 30 essays that examine the evolving and diverse field of American environmental history Provides a complete historiography of American environmental history Brings the field up to date to reflect the latest trends and encourages new directions for the field Includes the work of path breaking environmental historians from the founders of the field to contributions from innovative young scholars Takes stock of the discipline through five topically themed parts with essays ranging from American Indian Environmental Relations to Cities and Suburbs *The Routledge Handbook of Political Ecology* Tom Perreault, Gavin Bridge, James McCarthy, 2015-06-12 The Routledge Handbook of Political Ecology presents a comprehensive and authoritative examination of the rapidly growing field of political ecology Located at the intersection of geography anthropology sociology and environmental history political ecology is one of the most vibrant and conceptually diverse fields of inquiry into nature society relations within the social sciences The Handbook serves as an essential guide to this rapidly evolving intellectual landscape With contributions from over 50 leading authors the Handbook presents a systematic overview of political ecology's origins practices and core concerns and aims to advance both ongoing and emerging debates While there are numerous edited volumes textbooks and monographs under the heading political ecology these have tended to be relatively narrow in scope either as collections of empirically based mostly case study research on a given theme or broad overviews of the field aimed at undergraduate audiences The Routledge Handbook of Political Ecology is the first systematic comprehensive overview of the field With authors from North and South America Europe Australia and elsewhere the Handbook of Political Ecology provides a state of the art examination of political ecology addresses ongoing and emerging debates in this rapidly evolving field and charts new agendas for research policy and activism The Routledge Handbook of Political Ecology introduces political ecology as an interdisciplinary academic field By presenting a state of the art examination of the field it will serve as an invaluable resource for students and scholars It not only critically reviews the key debates in the field but develops them The Handbook will serve as an excellent resource for graduate and advanced undergraduate teaching and is a key reference text for geographers anthropologists sociologists environmental historians and others working in and around political ecology Climate Change L. Anders Sandberg, Tor Sandberg, 2010 Climate Change U 2014 Who U 2019's Carrying the Burden rallies the call of climate justice advocates and activists concerned with U 2018 system change not climate change U 2019 This call demands control of local resources the restitution of past wrongs and the willingness to conceive and accept different modes of living and seeing Back cover

City of Wood James Michael Buckley, 2024 In City of Wood architectural historian James Buckley explores San Francisco's rapid urban development as a product of the physical and economic transformation of the natural environment of the

American West San Francisco is best known as a product of the gold and silver that were mined from California's mountains and streams but as Buckley shows the city's growth was in fact fueled by a wide range of natural resources that could be converted into marketable commodities City of Wood investigates the architecture of a typical Western resource industry redwood lumber to determine how the exploitation of California's natural resources shaped the built environment of both San Francisco and its broader hinterland *Forests Are Gold* Pamela D. McElwee, 2016-04-01 *Forests Are Gold* examines the management of Vietnam's forests in the tumultuous twentieth century from French colonialism to the recent transition to market oriented economics as the country united prospered and transformed people and landscapes Forest policy has rarely been about ecology or conservation for nature's sake but about managing citizens and society a process Pamela McElwee terms environmental rule Untangling and understanding these practices and networks of rule illuminates not just thorny issues of environmental change but also the birth of Vietnam itself *Animal Traffic* Rosemary-Claire Collard, 2020-08-24 Parrots and snakes wild cats and monkeys exotic pets can now be found everywhere from skyscraper apartments and fenced suburban backyards to roadside petting zoos In *Animal Traffic* Rosemary Claire Collard investigates the multibillion dollar global exotic pet trade and the largely hidden processes through which exotic pets are produced and traded as lively capital Tracking the capture of animals in biosphere reserves in Mexico Guatemala and Belize their exchange at exotic animal auctions in the United States and the attempted rehabilitation of former exotic pets at a wildlife center in Guatemala Collard shows how exotic pets are fetishized both as commodities and as objects Their capture and sale sever their ties to complex socio ecological networks in ways that make them appear as if they do not have lives of their own Collard demonstrates that the enclosure of animals in the exotic pet trade is part of a bioeconomic trend in which life is increasingly commodified and objectified under capitalism Ultimately she calls for a wild life politics in which animals are no longer enclosed retain their autonomy and can live for the sake of themselves *When Money Grew on Trees* Greg Gordon, 2014-04-02 Born in the timber colony of New Brunswick Maine in 1848 Andrew Bononi Hammond got off to an inauspicious start as a teenage lumberjack By his death in 1934 Hammond had built an empire of wood that stretched from Puget Sound to Arizona and in the process had reshaped the American West and the nation's way of doing business *When Money Grew on Trees* follows Hammond from the rough and tumble world of mid nineteenth century New Brunswick to frontier Montana and the forests of Northern California from lowly lumberjack to unrivaled timber baron Although he began his career as a pioneer entrepreneur Hammond unlike many of his associates successfully negotiated the transition to corporate businessman Against the backdrop of western expansion and nation building his life dramatically demonstrates how individuals more than the impersonal forces of political economy shaped capitalism in this country and in doing so transformed the forests of the West from functioning natural ecosystems into industrial landscapes In revealing Hammond's instrumental role in converting the nation's public domain into private wealth historian Greg Gordon also shows how the struggle over natural resources gave

rise to the two most pervasive forces in modern American life the federal government and the modern corporation Combining environmental labor and business history with biography *When Money Grew on Trees* challenges the conventional view that the development and exploitation of the western United States was dictated from the East Coast The West Gordon suggests was perfectly capable of exploiting itself and in his book we see how Hammond and other regional entrepreneurs dammed rivers logged forests and leveled mountains in just a few decades Hammond and his like also built cities towns and a vast transportation network of steamships and railroads to export natural resources and import manufactured goods In short they established much of the modern American state and economy

Pricing Carbon in Australia Rebecca Pearse, 2017-11-08 In the mid 2000s it seemed that the global carbon market would take off and spark the worldwide transition to a profitable low carbon economy A decade on the experiment in carbon trading is failing Carbon market schemes have been plagued by problems and resistance to carbon pricing has come from the political Left and Right In the Australian case a national emissions trading scheme ETS was dismantled after a long bitter public debate The replacement Direct Action Plan is also in disrepute *Pricing Carbon in Australia* examines the rise and fall of the ETS in Australia between 2007 and 2015 exploring the underlying contradictions of marketised climate policy in detail Through this and other international examples the book offers a critique of the political economy of marketised climate policy exploring why the hopes for global carbon trading have been dashed The Australian case is interpreted in light of a broader legitimisation crisis as state strategies for temporarily displacing the climate crisis continue to fail Importantly in the wake of carbon market failure alternative agendas for state action are emerging as campaigns for the retrenchment of fossil fuel assets and for just renewable energy transition continue transforming climate politics and policy as we know it This book is a valuable resource for practitioners and academics in the fields of environmental policy and politics and social movement studies

New Natures Dolly Jørgensen, Finn Arne Jørgensen, Sara B. Pritchard, 2013-07-08 *New Natures* broadens the dialogue between the disciplines of science and technology studies STS and environmental history in hopes of deepening and even transforming understandings of human nature interactions The volume presents richly developed historical studies that explicitly engage with key STS theories offering models for how these theories can help crystallize central lessons from empirical histories facilitate comparative analysis and provide a language for complicated historical phenomena Overall the collection

exemplifies the fruitfulness of cross disciplinary thinking The chapters follow three central themes ways of knowing or how knowledge is produced and how this mediates our understanding of the environment constructions of environmental expertise showing how expertise is evaluated according to categories categorization hierarchies and the power afforded to expertise and lastly an analysis of networks mobilities and boundaries demonstrating how knowledge is both diffused and constrained and what this means for humans and the environment Contributors explore these themes by discussing a wide array of topics including farming forestry indigenous land management ecological science pollution trade energy and outer space among others The epilogue by the eminent environmental historian Sverker Sorlin views the deep entanglements of humans and nature in contemporary urbanity and argues we should preserve this relationship in the future Additionally the volume looks to extend the valuable conversation between STS and environmental history to wider communities that include policy makers and other stakeholders as many of the issues raised can inform future courses of action

Environmental Governance in a Populist/Authoritarian Era James McCarthy, 2020-05-21 This volume explores the many and deep connections between the widespread rise of authoritarian leaders and populist politics in recent years and the domain of environmental politics and governance how environments are known valued and managed for whose benefit and with what outcomes The volume is explicitly international in scope and comparative in design emphasizing both the differences and commonalities to be seen among contemporary authoritarian and populist political formations and their relations to environmental governance Prominent themes include the historical roots of and precedents for environmental governance in authoritarian and populist contexts the relationships between populism and authoritarianism and extractivism and resource nationalism environmental politics as an arena for questions of security and citizenship racialization and environmental politics the politics of environmental science and knowledge and progressive political alternatives In each domain using rich case studies contributors analyse what differences it makes when environmental governance takes place in authoritarian and populist political contexts This book was originally published as a special issue of Annals of the American Association of Geographers

The Routledge Handbook of Critical Resource Geography Matthew Himley, Elizabeth Havice, Gabriela Valdivia, 2021-07-12 This Handbook provides an essential guide to the study of resources and their role in socio environmental change With original contributions from more than 60 authors with expertise in a wide range of resource types and world regions it offers a toolkit of conceptual and methodological approaches for documenting analyzing and reimagining resources and the worlds with which they are entangled The volume has an introduction and four thematic sections The introductory chapter outlines key trajectories for thinking critically with and about resources Chapters in Section I Un knowing resources offer distinct epistemological entry points and approaches for studying resources Chapters in Section II Un knowing resource systems examine the components and logics of the capitalist systems through which resources are made circulated consumed and disposed of while chapters in Section III Doing critical resource geography

Methods advocacy and teaching focus on the practices of critical resource scholarship exploring the opportunities and challenges of carrying out engaged forms of research and pedagogy Chapters in Section IV Resource making world making use case studies to illustrate how things are made into resources and how these processes of resource making transform socio environmental life This vibrant and diverse critical resource scholarship provides an indispensable reference point for researchers students and practitioners interested in understanding how resources matter to the world and to the systems conflicts and debates that make and remake it *Managing the Unknown* Frank Uekötter, Uwe Lübken, 2014-03-01

Information is crucial when it comes to the management of resources But what if knowledge is incomplete or biased or otherwise deficient How did people define patterns of proper use in the absence of cognitive certainty Discussing this challenge for a diverse set of resources from fish to rubber these essays show that deficient knowledge is a far more pervasive challenge in resource history than conventional readings suggest Furthermore environmental ignorance does not inevitably shrink with the march of scientific progress these essays suggest more of a dialectical relationship between knowledge and ignorance that has different shapes and trajectories With its combination of empirical case studies and theoretical reflection the essays make a significant contribution to the interdisciplinary debate on the production and resilience of ignorance At the same time this volume combines insights from different continents as well as the seas in between and thus sketches outlines of an emerging global resource history **Environmental Transformations** Mark

Whitehead, 2014-04-16 From the depths of the oceans to the highest reaches of the atmosphere the human impact on the environment is significant and undeniable These forms of global and local environmental change collectively appear to signal the arrival of a new geological epoch the Anthropocene This is a geological era defined not by natural environmental fluctuations or meteorite impacts but by collective actions of humanity *Environmental Transformations* offers a concise and accessible introduction to the human practices and systems that sustain the Anthropocene It combines accounts of the carbon cycle global heat balances entropy hydrology forest ecology and pedology with theories of demography war industrial capitalism urban development state theory and behavioural psychology This book charts the particular role of geography and geographers in studying environmental change and its human drivers It provides a review of critical theories that can help to uncover the socio economic and political factors that influence environmental change It also explores key issues in contemporary environmental studies such as resource use water scarcity climate change industrial pollution and deforestation These issues are mapped through a series of geographical case studies to illustrate the particular value of geographical notions of space place and scale in uncovering the complex nature of environmental change in different socio economic political and cultural contexts Finally the book considers the different ways in which nations communities and individuals around the world are adapting to environmental change in the twenty first century Particular attention is given throughout to the uneven geographical opportunities that different communities have to adapt to environmental change and

to the questions of social justice this situation raises This book encourages students to engage in the scientific uncertainties that surround the study of environmental change while also discussing both pessimistic and more optimistic views on the ability of humanity to address the environmental challenges of our current era **Spaces of Environmental Justice** Ryan

Holifield, Michael Porter, Gordon Walker, 2011-06-28 In this cutting edge volume leading scholars examine a diverse range of environmental inequalities from around the world Shows how far the field has moved beyond its original focus on uneven distributions of pollution in the USA Considers the influence of critical geographical and social theory on environmental justice studies Examines a range of possibilities for future research directions Explores the challenges of investigating and pursuing environmental justice at a time of rapid economic and environmental change
