Engaging the Public to Fight the Consequences of Terrorism and Disasters Jumber Mamasakhlisi, Dorit Subotta, Dieter W.G. Reimer, 2015-05-15 Governments must work tirelessly to update their preparedness for dealing with natural and man made disasters as well as taking account of the increasingly present threat of terrorism Efficient international cooperation is key to achieving safety and internationalizing security policy This book presents the proceedings of the NATO Advanced Research Workshop ARW Engaging the Public to Fight the Consequences of Terrorism and Disasters held in Tbilisi Georgia in June 2014 The purpose of the workshop was to analyze accumulated European theoretical knowledge and practical experience in the field of disaster prevention and the involvement of the public in preventing and fighting the consequences of terrorism as well as natural and man made disasters There was a particular focus on the perspective of the region especially with a view to meeting European

Union standards and setting uniform and independent standards for hazard and risk assessment methods The protection of economically critical infrastructure such as dams pipelines and transport and storage facilities was addressed as were the issues of managing water and non renewable resources the disposal of dangerous chemicals and radioactive waste and defensible methods of transport for fuel supplies and key personnel Contributions reflected the extensive experience of the participating NATO and partner countries including Armenia Austria Bulgaria Georgia Germany Italy Moldova the Netherlands Romania Turkey and Ukraine as well as international organizations such as UNECE and NATO *ECOOP '87. European Conference on Object-Oriented Programming* Jean Bezivin, Jean-Marie Hullot, Pierre Cointe, Henry Lieberman, 2007-03-06 In October 1983 an informal meeting was organized in Le Cap d Agde with the help of the BIGRE bulletin Sixty people turned out to hear more than ten presentations on object oriented programming More important was their unanimous demand for other more structured encounters So about one year later the Object group was created by AFCET A second workshop was organized in Brest and again one year later in Paris each time showing increased attendance and interest The success of these meetings and the fact that similar activities were taking place in other European countries especially Great Britain and Germany led to the idea of an annual European Conference providing a forum for theorists and practitioners interested in the object oriented programming paradigm It is impossible to acknowledge here all the people and organizations that welcomed with great enthusiasm the birth of the ECOOP conference and contributed to its organization More than a hundred submissions were received and the program committee had the unpleasant task of turning down many valuable contributions We hope however that the selection of papers for ECOOP 87 emphasizes the fundamental issues and problems of object oriented programming and will point toward interesting future research directions Knowledge-based Systems: Advanced Concepts, Techniques And Applications Spyros Tzafestas, 1997-06-16 The field of knowledge based systems KBS has expanded enormously during the last years and many important techniques and tools are currently available Applications of KBS range from medicine to engineering and aerospace This book provides a selected set of state of the art contributions that present advanced techniques tools and applications These contributions have been prepared by a group of eminent researchers and professionals in the field The theoretical topics covered include knowledge acquisition machine learning genetic algorithms knowledge management and processing under uncertainty conflict detection and resolution structured knowledge architectures and natural language based man machine communication The Applications include Real time decision support system fault diagnosis quality assessment manufacturing production robotic assembly and robotic welding The reader can save considerable time in searching the scattered literature in the field and can find here a powerful set of how to do issues and results Knowledge Acquisition: Selected Research and Commentary Sandra Marcus, 2012-12-06 What follows is a sampler of work in knowledge acquisition It comprises three technical papers and six guest editorials The technical papers give an in depth look at some of the important issues and current approaches in

knowledge acquisition The editorials were produced by authors who were basically invited to sound off I've tried to group and order the contributions somewhat coherently The following annotations emphasize the connections among the separate pieces Buchanan's editorial starts on the theme of Can machine learning offer anything to expert systems He emphasizes the practical goals of knowledge acquisition and the challenge of aiming for them Lenat's editorial briefly describes experience in the development of CYC that straddles both fields He outlines a two phase development that relies on an engineering approach early on and aims for a crossover to more automated techniques as the size of the knowledge base increases Bareiss Porter and Murray give the first technical paper It comes from a laboratory of machine learning researchers who have taken an interest in supporting the development of knowledge bases with an emphasis on how development changes with the growth of the knowledge base The paper describes two systems The first Protos adjusts the training it expects and the assistance it provides as its knowledge grows The second KI is a system that helps integrate knowledge into an already very large knowledge base

Rippin, Öner Hortacsu, 1996-12-13 Batch chemical processing has in the past decade enjoyed a return to respectability as a valuable effective and often preferred mode of process operation This book provides the first comprehensive and authoritative coverage that reviews the state of the art development in the field of batch chemical systems engineering applications in various chemical industries current practice in different parts of the world and future technical challenges Developments in enabling computing technologies such as simulation mathematical programming knowledge based systems and prognosis of how these developments would impact future progress in the batch domain are covered Design issues for complex unit processes and batch plants as well as operational issues such as control and scheduling are also addressed

Foundations of Knowledge Base Management Joachim W. Schmidt, Costantino

Thanos, 2012-12-06 In the past applied artificial intelligence systems were built with particular emphasis on general reasoning methods intended to function efficiently even when only relatively little domain specific knowledge was available In other words AI technology aimed at the processing of knowledge stored under comparatively general representation schemes Nowadays the focus has been redirected to the role played by specific and detailed knowledge rather than to the reasoning methods themselves Many new application systems are centered around knowledge bases i.e. they are based on large collections of facts rules and heuristics that capture knowledge about a specific domain of applications Experience has shown that when used in combination with rich knowledge bases even simple reasoning methods can be extremely effective

in a wide variety of problem domains Knowledge base construction and management will thus become the key factor in the development of viable knowledge based applications Knowledge Base Management Systems KBMSs are being proposed that provide user friendly environments for the construction retrieval and manipulation of large shared knowledge bases In addition to deductive reasoning KBMSs require operational characteristics such as concurrent access integrity maintenance error recovery security and perhaps distribution For the development of KBMSs the need to integrate concepts and technologies from different areas such as Artificial Intelligence Databases and Logic has been widely recognized One of the central issues for KBMSs is the framework used for knowledge representation semantic networks frames rules and logics are proposed by the AI and logic communities Real-time Systems with Transputers Occam User Group.
