

NOTES AND SOLUTIONS TO *THERMAL PHYSICS* BY CHARLES KITTLE AND HERBERT KROEMER

ERNEST YEUNG - LOS ANGELES

ABSTRACT. These are notes and solutions to Kittel and Kroemer's *Thermal Physics*. The solutions are (almost) complete; I will continuously add to sub-sections, before the problems in each chapter, my notes that I write down as I read (and continuously re-read).

I am attempting a manifold formulation of the equilibrium states in the style of Schutz's *Geometrical Methods of Mathematical Physics* and will point out how it applies directly to *Thermal Physics*. Other useful references along this avenue of investigation is provided at the very bottom in the references.

Any and all feedback, including negative feedback, is welcomed and you can reach me by email or my wordpress.com blog.

You are free to copy, edit, paste, and add onto the pdf and LaTeX files as you like in the spirit of open-source software. You are responsible adults to use these notes and solutions as governed by the Caltech Honor Code: "No member of the Caltech community shall take unfair advantage of any other member of the Caltech community" and follow the Honor Code in spirit.

1. STATES OF A MODEL SYSTEM

2. ENTROPY AND TEMPERATURE

Thermal Equilibrium. EY : 20150821 Based on considering the physical setup of two systems that can only exchange energy between each other, that are in thermal contact, this is a derivation of temperature.

$U = U_1 + U_2$ is constant total energy of 2 systems 1, 2 in thermal contact

multiplicity $g(N, U)$ of combined system is

$$g(N, U) = \sum_{U_1 \leq U} g_1(N_1, U_1) g_2(N_2, U - U_1)$$

The "differential" of $g(N, U)$ is

$$dg = \left(\frac{\partial g_1}{\partial U_1} \right)_{N_1} g_2 dU + g_1 \left(\frac{\partial g_2}{\partial U_2} \right)_{N_2} dU_2 = 0$$

EY : 20150821 This step can be made mathematically sensible by considering the exterior derivative d of $g \in C^\infty(\Sigma)$, where Σ is the manifold of states of the system, with local coordinates N, U , where U happens to be a global coordinate. Then, consider a curve in Σ s.t. it has no component in $\frac{\partial}{\partial N}$, $\frac{\partial}{\partial N_1}$, and this curve is a "null curve" so that the vector field $X \in \mathcal{X}(\Sigma)$ generated by this curve is s.t. $dg(X) = 0$.

With $-dU_1 = dU_2$,

$$\frac{1}{g_1} \left(\frac{\partial g_1}{\partial U_1} \right)_{N_1} = \frac{1}{g_2} \left(\frac{\partial g_2}{\partial U_2} \right)_{N_2} \implies \left(\frac{\partial \ln g_1}{\partial U_1} \right)_{N_1} = \left(\frac{\partial \ln g_2}{\partial U_2} \right)_{N_2}$$

Define

$$\sigma(N, U) := \ln g(N, U)$$

Then

$$\implies \left(\frac{\partial \sigma_1}{\partial U_1} \right)_{N_1} = \left(\frac{\partial \sigma_2}{\partial U_2} \right)_{N_2}$$

Palmer, 2000-05-30 Solid State Physics opens with the adiabatic approximation to the many body problem of a system of ions and valence electrons After chapters on lattice symmetry structure and dynamics it then proceeds with four chapters devoted to the single electron theory of the solid state Semiconductors and dielectrics are covered in depth and chapters on magnetism and superconductivity follow The book concludes with a chapter on solid surfaces Every section is followed by solved problems some of them illustrating areas of current interest in solid state physics to give the student a practical working knowledge of the subject and the text is illustrated by many supplementary examples **Nonlinear Periodic**

Waves And Their Modulations: An Introductory Course Anatoly M Kamchatnov, 2000-09-05 Although the mathematical theory of nonlinear waves and solitons has made great progress its applications to concrete physical problems are rather poor especially when compared with the classical theory of linear dispersive waves and nonlinear fluid motion The Whitham method which describes the combining action of the dispersive and nonlinear effects as modulations of periodic waves is not widely used by applied mathematicians and physicists though it provides a direct and natural way to treat various problems in nonlinear wave theory Therefore it is topical to describe recent developments of the Whitham theory in a clear and simple form suitable for applications in various branches of physics This book develops the techniques of the theory of nonlinear periodic waves at elementary level and in great pedagogical detail It provides an introduction to a Whitham's theory of modulation in a form suitable for applications The exposition is based on a thorough analysis of representative examples taken from fluid mechanics nonlinear optics and plasma physics rather than on the formulation and study of a mathematical theory Much attention is paid to physical motivations of the mathematical methods developed in the book The main applications considered include the theory of collisionless shock waves in dispersive systems and the nonlinear theory of soliton formation in modulationally unstable systems Exercises are provided to amplify the discussion of important topics

such as singular perturbation theory Riemann invariants the finite gap integration method and Whitham equations and their solutions

Semiconductor-Laser Fundamentals Weng W. Chow, Stephan W. Koch, 2013-03-09 Since Fall of 1993 when we completed the manuscript of our book *Semiconductor Laser Physics* W W Chow S W Koch and M Sargent III Springer Berlin Heidelberg 1994 many new and exciting developments have taken place in the world of semiconductor lasers Novel laser and amplifier structures were developed and others for example the VCSEL vertical cavity surface emitting laser and monolithic MOPA master oscillator power amplifier made the transition from research and development to production When investigating some of these systems we discovered instances when device performance and thus design depend critically on details of the gain medium properties e g spectral shape and carrier density dependence of the gain and refractive index New material systems were also introduced with optical emission wave lengths spanning from the mid infrared to the ultraviolet Particularly note worthy are laser and light emitting diodes based on the wide bandgap group III nitride and II VI compounds These devices emit in the visible to ultra violet wavelength range which is important for the wide variety of optoelectronic applications While these novel semiconductor laser materials show many similarities with the more conventional near infrared systems they also possess rather different material parameter combinations These differences appear as band structure modifications and as increased importance of Coulomb effects such that e g excitonic signatures resulting from the attractive electron hole interaction are generally significantly more prominent in the wide bandgap systems

issues it raises range well beyond the confines of the case studies of the three theologians examined and have relevance outside the particular context of Hitler's Germany That the book compels the reader to rethink some important questions about the susceptibility of intelligent human beings to as distasteful a phenomenon as fascism is an important achievement Ian Kershaw History Today Ericksen's study throws light on the kinds of perversion to which Christian beliefs and attitudes are easily susceptible and is therefore timely and useful Gordon D Kaufman Los Angeles Times An understanding and carefully documented study Ernst C Helmreich American Historical Review This dark book poses a number of social economic and cultural questions that one has to answer before condemning Kittel Althaus and Hirsch William Griffin
