Ruffell, Jennifer McKinley, 2008-08-06 This book is a comprehensive introduction to the application of geoscience to criminal investigations Clearly structured throughout the text follows a path from the large scale application of remote sensing landforms and geophysics in the first half to the increasingly small scale examination of rock and soils to trace amounts of material The two scales of investigation are linked by geoscience applications to forensics that can be applied at a range of dimensions These include the use of topographic mapping x ray imaging geophysics and remote sensing in assessing whether

sediment rocks or concrete may have hidden or buried materials inside for example drugs weapons bodies This book describes the wider application of many different geoscience based methods in assisting law enforcers with investigations such as international and national crimes of genocide and pollution terrorism and domestic crime as well as accident investigation The text makes a clear link to the increasingly important aspects of the spatial distribution of geoscience materials be it soil sampling or the distribution of mud spatter on clothing Geographic Information Science and geostatistics A comprehensive introduction to the application of geoscience to criminal investigation Examples taken from an environmental and humanitarian perspective in addition to the terrorist and domestic criminal cases more regularly discussed A chapter on the use of GIS in criminalistics and information on unusual applications and methods for example underwater scene mapping and extraterrestrial applications Material on how geoscience methods and applications are used at a crime scene Accompanying website including key images and references to further material An invaluable text for both undergraduate and postgraduate students taking general forensic science degrees or geoscience courses The whole book is peppered with useful and appropriate examples from the authors wide experiences and also from the wider literature an essential purchase for any forensic science department as well as for any law enforcement organisation Lorna Dawson Macaulay Institute

**Environmental and Criminal Geoforensics** D. Pirrie,A. Ruffell,L.A. Dawson ,2013-12-05 Geological techniques are widely used in two aspects of serious criminal investigations 1 the search for clandestine burial sites based on near surface geophysics or through the detection of decomposition signals and 2 the analysis of trace evidence to identify its source location or test the possible association between the trace evidence and a known location of an offence Although geoforensics is used in such investigations world wide there are still considerable gaps in the published literature In addition there is increasing concern regarding the illegal release of wastes either into the atmosphere water courses or on to the land surface and a growing realization that the techniques used in criminal forensics are equally useful in the investigation of environmental crime This book bridges the gap between environmental and criminal geoforensics with conceptual methodological and case study contributions This demonstrates the significant potential that geoforensics holds for investigating and regulatory officers
