Gotham Unbound Ted Steinberg, 2014-06-03 Winner of the 2015 PROSE Award for US History A fascinating encyclopedic history of greater New York City through an ecological lens Publishers Weekly starred review the sweeping story of one of the most man made spots on earth Gotham Unbound recounts the four century history of how hundreds of square miles of open marshlands became home to six percent of the nation s population Ted Steinberg brings a vanished New York back to vivid rich life You will see the metropolitan area anew not just as a dense urban goliath but as an estuary once home to miles of oyster reefs wolves whales and blueberry bogs That world gave way to an onslaught managed by thousands from Governor John Montgomerie who turned water into land and John Randel who imposed a grid on Manhattan to Robert Moses Charles Urstadt Donald Trump and Michael Bloomberg Weighty and wonderful Resting on a sturdy foundation of research and imagination Steinberg s volume begins with Henry Hudson s arrival aboard the Half Moon in 1609 and ends with another transformative event Hurricane Sandy in 2012 The Plain Dealer Cleveland This book is a powerful account of the relentless development that New Yorkers wrought as they plunged headfirst into the floodplain and transformed untold amounts of salt marsh and shellfish beds into a land jam packed with people asphalt and steel and the reeds and gulls that thrive among them With metropolitan areas across the globe on a collision course with rising seas Gotham Unbound helps explain how one of the most important cities in the world has ended up in such a perilous situation Steinberg challenges the conventional arguments that geography is destiny And he makes the strong case that for all the ecological advantages of urban living hyperdensity by itself is not necessarily a sound environmental strategy The New York Times **Gotham Unbound**

Blue-Green Rehabilitation Philip Hayward, 2025-06-30 In recent decades there has been a burgeoning interest in the development of blue green corridors areas where waterways are complemented by adjoining green spaces and related paths and leisure facilities Urban planners have increasingly favoured such zones as a means of refreshing inner city spaces In many cases such projects have involved the rehabilitation of former industrial and or otherwise polluted waterways and adjacent land These newly configured blue green spaces have benefitted residents and provided a substantial attraction to tourists through in and on the water options e g swimming kayaking fishing cruise boat transit etc waterside relaxation and a range of riverbank activities The establishment of managed green spaces has also seen the return of a variety of native species to such areas and the re presentation of former waterside industrial features as heritage artefacts has also added value and appeal to such corridors The anthology comprises nine international case studies that illustrate examples of best practice and or the problems that can arise from such rehabilitations such as gentrification forcing housing prices up and dispersing established communities and de industrialisation that leads to reduced livelihood opportunities Individual studies in the volume analyse the dynamics of neglect and rehabilitation contrasting stakeholder agendas destination branding and regional national orientations Collectively the volume comprises an important reference point for future blue green rehabilitation projects and the conclusion offers an agenda for the development of just and sustainable blue green initiatives

How the World Breaks Stan Cox, Paul Cox, 2016-07-12 We've always lived on a dangerous planet but its disasters aren't what they used to be *How the World Breaks* gives us a breathtaking new view of crisis and recovery on the unstable landscapes of the Earth's hazard zones Father and son authors Stan and Paul Cox take us to the explosive fire fronts of overheated Australia the future lost city of Miami the fights over whether and how to fortify New York City in the wake of Sandy the Indonesian mud volcano triggered by natural gas drilling and other communities that are reimagining their lives after quakes superstorms tornadoes and landslides In the very decade when we should be rushing to heal the atmosphere and address the enormous inequalities of risk a strange idea has taken hold of global disaster policy resilience Its proponents say that threatened communities must simply learn the art of resilience adapt to risk and thereby survive This doctrine obscures the human hand in creating disasters and requires the planet's most beleaguered people to absorb the rush of floodwaters and the crush of landslides freeing the world economy to go on undisturbed The Coxes' great contribution is to pull the disaster debate out of the realm of theory and into the muck and ash of the world's broken places There we learn that change is more than mere adaptation and life is more than mere survival Ultimately *How the World Breaks* reveals why unless we address the social ecological and economic roots of disaster millions more people every year will find themselves spiraling into misery It is essential reading for our time
