 Cyber Sabotage Introducing Consequence Driven Cyber Informed Engineering CCE introduces a new methodology to help
 critical infrastructure owners operators and their security practitioners make demonstrable improvements in securing their
 most important functions and processes Current best practice approaches to cyber defense struggle to stop targeted
 attackers from creating potentially catastrophic results From a national security perspective it is not just the damage to the
 military the economy or essential critical infrastructure companies that is a concern It is the cumulative downstream effects
 from potential regional blackouts military mission kills transportation stoppages water delivery or treatment issues and so on
 CCE is a validation that engineering first principles can be applied to the most important cybersecurity challenges and in so
 doing protect organizations in ways current approaches do not The most pressing threat is cyber enabled sabotage and CCE
 begins with the assumption that well resourced adaptive adversaries are already in and have been for some time undetected
 and perhaps undetectable Chapter 1 recaps the current and near future states of digital technologies in critical
 infrastructure and the implications of our near total dependence on them Chapters 2 and 3 describe the origins of the
 methodology and set the stage for the more in depth examination that follows Chapter 4 describes how to prepare for an

engagement and chapters 5-8 address each of the four phases. The CCE phase chapters take the reader on a more granular walkthrough of the methodology with examples from the field, phase objectives, and the steps to take in each phase. Concluding chapter 9 covers training options and looks towards a future where these concepts are scaled more broadly.
