Ecological Law and the Planetary Crisis Geoffrey Garver, 2020-10-29 This book uses a transdisciplinary systems approach to examine how Earth s human caused ecological crisis arose and presents a new legal approach for overcoming it Ecological Law and the Planetary Crisis first examines how the history of humanity s social metabolism along with the history of human inventions and ideas

led to the human Earth dilemma we see today and explains why contemporary law is inadequate for confronting this dilemma. The book goes on to propose ecological law that maintains human activity within ecological limits such as planetary boundaries while ensuring social justice and equity as an essential element of an urgently needed radical pathway of change toward a perpetual mutually enhancing human Earth relationship. Finally, it offers a systems-based analytical tool for organizing actions to promote the transition from environmental to ecological law. Increasing the visibility, clarity, and development of ecological law, this book will be of great interest to students and scholars of ecological and environmental law and governance.

Brand Aid Lisa Ann Richey, Stefano Ponte, 2011. A critical account of the rise of celebrity-driven compassionate consumption. Coffee, Sex and Biscuits Rolf Witzsche, *World in Transition*. Wissenschaftlicher Beirat der Bundesregierung Globale Umweltveränderungen (Germany), 2001. Comprehensive assessment from the leading German environmental scientists of the state of the world's living resources or biosphere. Covers all aspects of the subject: biodiversity and genetic diversity, landscape and ecosystems, its role in the Earth's system, and human impacts on it. Reviews global policies and research strategies on the biosphere and advocates urgent policy actions. A major authoritative contribution to environmental science and policy. Biodiversity: the planet's natural capital is undergoing a dramatic collapse: its Sixth Extinction. The losses, which are due to human activities and overexploitation of the biosphere, are irreversible. They are undermining the basis of future well-being and prosperity, including genetic resources and food production, climate stability, and coastal and soil protection. The scientists of the German Advisory Council on Global Change have produced an authoritative and alarming analysis of the state of the biosphere. They show that the time remaining for remedial action is fast disappearing, and they set out a range of initiatives to be undertaken at different levels. Among their main urgent recommendations are protecting 10-20% of the global land area, an Intergovernmental Panel on Biodiversity to provide scientific advice, conservation of the diversity of cultivated as well as wild plant species, greater multilateral cooperation, and implementation of the Convention on Biological Diversity. The volume makes a highly significant contribution to the scientific and policy debates on these critical issues. It will be essential reading for those engaged with them.
