Cheng, 2015-11-19 This book presents theory driven discussion on the link between implementing green shipping practices GSP and shipping firm performance It examines the shipping industry s challenge of supporting economic growth while enhancing environmental performance Consisting of nine chapters the book covers topics such as the conceptualization of green shipping practices GSPs measurement scales for evaluating GSP implementation greening capability greening and performance relativity GPR green management practice and green shipping network In view of the increasing quest for environment protection in the shipping sector this book provides a good reference for firms to understand and evaluate their capability in carrying out green operations on their shipping activities

*Shipping Operations Management* I.D. Visvikis, P.M. Panayides, 2017-10-09 This book focuses on the management of ship operations an activity that requires integrative knowledge and technical expertise that spans various disciplines As such ship operations personnel are expected to be well versed with aspects of management economics engineering technology and law Further ship operations management requires the ability to identify and neutralize threats and to manage risks and make decisions that will optimize costs and contribute to performance improvements Despite the fundamental nature of ship operations management no book has ever attempted to reconcile and compile a comprehensive body of knowledge while pursuing a coherent structured and systematic approach This edited volume addresses that fundamental gap in the extant literature and brings together a wealth of knowledge from experts in their respective fields Concretely it explores issues of organization technical management crewing and behavioral issues chartering and post fixture risk management finance legal aspects of international conventions and regulations attainment of safety security and marine insurance as well as ocean governance and sustainability As such the book offers a vital reference guide for maritime companies and organizations while also serving as a teaching supplement in academic and professional maritime programmes

*Ship Management* Pengfei Zhang, Lijun Tang, 2021-09-19 Ship Management Theory and Practice unpacks the complexity of this crucial maritime activity by spelling out its key elements and the connections and linkages between them Opening with an introduction and an overview of the special characteristics of ship management the text then focuses on different strands of management It offers dedicated chapters on strategic management commercial management operations management technical management human resource management and compliance management weaving in numerous international examples throughout The final chapter looks to the future exploring the challenges facing ship management and the impact of digitalisation Ship Management Theory and Practice is a valuable resource for upper level students of shipping management and maritime operations and can also serve as a one stop reference for researchers and industry practitioners

*Green Logistics* Alan McKinnon, Michael Browne, Anthony Whiteing, Maja Piecyk, 2015-02-03 Leading the way in current thinking on environmental logistics Green Logistics provides a unique insight on the

environmental impacts of logistics and the actions that companies and governments can take to deal with them. It is written by leading researchers in the field and provides a comprehensive view of the subject for students, managers and policy makers. Fully updated, the 3rd edition of *Green Logistics* has a more global perspective than previous editions. It introduces new contributors and international case studies that illustrate the impact of green logistics in practice. There is a new chapter on the links between green logistics and corporate social responsibility and a series of postscripts examining the effects of new developments such as 3D printing, distribution by drone, the physical internet and the concept of peak freight. Other key topics examined include carbon auditing of supply chains, transferring freight to greener transport modes, reducing the environmental impact of warehousing, improving the energy efficiency of freight transport, making city logistics more environmentally sustainable, reverse logistics for the management of waste, role of government in promoting sustainable logistics. The 3rd edition of *Green Logistics* includes indispensable online supporting materials including graphics, tables, chapter summaries and guidelines for lecturers.

*Sustainable Shipping* Harilaos N. Psaraftis, 2019-02-11

International shipping is currently at a crossroads. The decision of the International Maritime Organization (IMO) in April 2018 to adopt an Initial Strategy so as to achieve by 2050 a reduction of at least 50% in maritime greenhouse gas (GHG) emissions vis-à-vis 2008 levels epitomizes the last among a series of recent developments as regards sustainable shipping. It also sets the scene on what may happen in the future. Even though many experts and industry circles believe that the IMO decision is in line with the COP21 climate change agreement in Paris in 2015, others disagree either on the ground that the target is not ambitious enough or on the ground that no clear pathway to reach the target is currently visible. This book takes a cross-disciplinary view of the various dimensions of the maritime transportation sustainability problem. Cross-disciplinary means that a variety of angles are used to examine the book topics and these mainly include the technological angle, the economics angle, the logistics angle and the environmental angle. The book reviews models that can be used to evaluate decisions, policy alternatives and trade-offs. For sustainable shipping, a spectrum of technical, logistics-based and market-based measures are being contemplated. All may have important side effects as regards the economics and logistics of the maritime supply chain, including ports and hinterland connections. The objective to attain an acceptable environmental performance while at the same time respecting traditional economic performance criteria so that shipping remains viable is and is likely to be a central goal for both industry and policy makers in the years ahead. At the same time, policy fragmentation is likely to create distortions of competition and sub-optimal solutions. This book attempts to address these issues and identify better solutions.

*Sustainable Shipping: A Cross-Disciplinary View* includes chapters that cover many relevant topics. These include a general view of maritime transport sustainability, green ship technologies, information and communication technologies (ICTs) for sustainable shipping, green tramp ship routing and scheduling, green liner network design and speed optimization, market-based measures, oil pollution, ship recycling, sulphur emissions, ballast water management, alternative fuels and green ports.

are also covered The book concludes by discussing prospects for the future with a focus on the IMO Initial Strategy This book contains a unique wealth of information on sustainable shipping The knowledge it provides is rigorous complete and well supported by statistics technical reports and scientific references The treatment of the various topics is not only informative but also analytical and critical Gilbert Laporte Maritime Economics Logistics 12 May 2020 Sustainability in the Maritime Domain Angela Carpenter,Tafsir M. Johansson,Jon A. Skinner,2021-05-29 This volume explores options for a sustainable maritime domain including maritime transportation such as Maritime Spatial Planning MSP maritime education and training maritime traffic and advisory systems maritime security Other activities in the maritime domain covered in the book include small scale fisheries and sustainable fisheries and greening the blue economy The book aims to provide the building blocks needed for a framework for good ocean governance a framework that will serve through the next decade and and hopefully well beyond the 2030 milestone of the UN Agenda for Sustainable Development In short this book brings together the problems of the current world and sustainable solutions that are in the development process and will eventually materialize in the not so distant future Additionally the book presents a trans disciplinary analysis of integral sustainable maritime transportation solutions and crucial issues relevant to good ocean governance that have recently been discussed at different national regional and international fora highlighting ongoing work to develop and support governance systems that facilitate industry requirements and meet the needs of coastal states and indigenous peoples of researchers of spatial planners and of other sectors dependent on the oceans The book will be of interest to researchers across many disciplines especially those that are engaged in cross sectoral research and developments in the maritime transport sector and across the wider maritime domain To this end the book covers areas including natural and social sciences geographical studies spatial planning maritime security and gender studies as they relate to transport and the wider maritime sector In addition the book explores frameworks for sustainable ocean governance being developed under the UN s Agenda for Sustainable Development to 2030 It will also look beyond the 2030 milestone under that Agenda and will be of use to national and international policymakers and practitioners government actors at the EU and other regional and national levels and to researchers of ocean governance sustainability and management and maritime transport *Smart Technologies in Urban Engineering* Olga Arsenyeva,Tatiana Romanova,Maria Sukhonos,Yevgen Tsegelnyk,2022-11-29 This book offers a comprehensive review of smart technologies and perspectives on their application in urban engineering It covers a wide range of applications from transport and energy management to digital manufacturing smart city environment and sustainable development providing readers with new ideas for future research and collaborations This book presents select papers from the International Conference on Smart Technologies in Urban Engineering STUE 2022 held to commemorate the 100th anniversary of the O M Beketov National University of Urban Economy in Kharkiv Ukraine on June 9 11 2022 All the contributions offer plenty of valuable information and would be of great benefit to the experience exchange among scientists in urban engineering

**Green Transportation Logistics** Harilaos N. Psaraftis, 2015-07-13 This book examines the state of the art in green transportation logistics from the perspective of balancing environmental performance in the transportation supply chain while also satisfying traditional economic performance criteria Part of the book is drawn from the recently completed European Union project Super Green a three year project intended to promote the development of European freight corridors in an environmentally friendly manner Additional chapters cover both the methodological base and the application context of green transportation logistics Individual chapters look at the policy context the basics of transportation emissions Green Corridors basics the concept of TEN T Trans European Network Benchmarking of green corridors the potential role of ICT Information and Communication Technologies Green vehicle routing Reducing maritime CO2 emissions via market based measures and speed and route optimization Sulphur emissions Lifecycle emissions Green rail transportation Green air transportation Green inland navigation and possible areas for further research Throughout the book pursues the goal of win win solutions and analyzes the phenomenon of push down pop up wherein a change in one aspect of a problem can cause another troubling aspect to arise For example speed reduction in maritime transportation can reduce emissions and fuel costs but could require additional ships and could raise in transit inventory costs Or regulations to reduce sulphur emissions may ultimately increase CO2 elsewhere in the supply chain The book takes stock at the various tradeoffs that are at stake in the goal of greening the supply chain and looks at where balances can be struck
