Graphics Recognition. Current Trends and Challenges Bart Lamiroy, Jean-Marc Ogier, 2014-09-18 This book constitutes the thoroughly refereed post conference proceedings of the 10th International Workshop on Graphics Recognition GREC 2013 held in Bethlehem PA USA in August 2013 The 20 revised full papers presented were carefully reviewed and selected from 32 initial submissions Graphics recognition is a subfield of document image analysis that deals with graphical entities in engineering drawings sketches maps architectural plans musical scores mathematical notation tables and diagrams Accordingly the conference papers are organized in 5 topical sessions on symbol spotting and retrieval graphics recognition in context structural and perceptual based approaches low level processing and performance evaluation and ground truthing

Document Image Analysis K.C. Santosh, 2018-09-18 The book focuses on one of the key issues in document image processing graphical symbol recognition which is a sub field of the larger research domain of pattern recognition It covers several approaches statistical structural and syntactic and discusses their merits and demerits considering the context Through comprehensive experiments it also explores whether these approaches can be combined The book presents research problems state of the art methods that convey basic steps as well as prominent techniques evaluation metrics and protocols and research standpoints directions that are associated with it However it is not limited to straightforward isolated graphics visual patterns recognition it also addresses complex and composite graphical symbols recognition which is motivated by real world industrial problems *Current Challenges in Patent Information Retrieval* Mihai Lupu, Katja Mayer, Noriko Kando, Anthony J. Trippe, 2017-03-24 This second edition provides a systematic introduction to the work and views of the emerging patent search research and innovation communities as well as an overview of what has been achieved and perhaps even more importantly of what remains to be achieved It revises many of the contributions of the first edition and adds a significant number of new ones The first part Introduction to Patent Searching includes two overview chapters on the peculiarities of patent searching and on contemporary search technology respectively and thus sets the scene for the subsequent parts The second part on Evaluating Patent Retrieval then begins with two chapters dedicated to patent evaluation campaigns followed by two chapters discussing complementary issues from the perspective of patent searchers and from the perspective of related domains notably legal search High Recall Search includes four completely new chapters

dealing with the issue of finding only the relevant documents in a reasonable time span The last and with six papers the largest part on Special Topics in Patent Information Retrieval covers a large spectrum of research in the patent field from classification and image processing to translation Lastly the book is completed by an outlook on open issues and future research Several of the chapters have been jointly written by intellectual property and information retrieval experts However members of both communities with a background different to that of the primary author have reviewed the chapters making the book accessible to both the patent search community and to the information retrieval research community It also not only offers the latest findings for academic researchers but is also a valuable resource for IP professionals wanting to learn about current IR approaches in the patent domain *Graphics Recognition* Young-Bin Kwon,Jean-Marc Ogier,2013-02-11 This book constitutes the thoroughly refereed post conference proceedings of the 9th International Workshop on Graphics Recognition GREC 2011 held in Seoul Korea September 15 16 2011 The 25 revised full papers presented were carefully selected from numerous submissions Graphics recognition is a subfield of document image analysis that deals with graphical entities in engineering drawings sketches maps architectural plans musical scores mathematical notation tables and diagrams Accordingly the conference papers are organized in 5 technical sessions covering the topics such as map and ancient documents symbol and logo recognition sketch and drawings performance evaluation and challenge processing

Bertrand Russell and the Nature of Propositions Samuel Lebens,2017-05-25 Bertrand Russell and the Nature of Propositions offers the first book length defence of the Multiple Relation Theory of Judgement MRTJ Although the theory was much maligned by Wittgenstein and ultimately rejected by Russell himself Lebens shows that it provides a rich and insightful way to understand the nature of propositional content In Part I Lebens charts the trajectory of Russell s thought before he adopted the MRTJ Part II reviews the historical story of the theory What led Russell to deny the existence of propositions altogether Why did the theory keep evolving throughout its short life What role did G F Stout play in the evolution of the theory What was Wittgenstein s concern with the theory and if we can t know what his concern was exactly then what are the best contending hypotheses And why did Russell give the theory up In Part III Lebens makes the case that Russell s concerns with the theory weren t worth its rejection Moreover he argues that the MRTJ does most of what we could want from an account of propositions at little philosophical cost This book bridges the history of early analytic philosophy with work in contemporary philosophy of language It advances a bold reading of the theory of descriptions and offers a new understanding of the role of Stout and the representation concern in the evolution of the MRTJ It also makes a decisive contribution to philosophy of language by demonstrating the viability of a no proposition theory of propositions *Empirical Comics Research* Alexander Dunst,Jochen Laubrock,Janina Wildfeuer,2018-07-03 This edited volume brings together work in the field of empirical comics research Drawing on computer and cognitive science psychology and art history linguistics and literary studies each chapter presents innovative methods and establishes the practical and theoretical motivations for the

quantitative study of comics manga and graphic novels Individual chapters focus on corpus studies the potential of crowdsourcing for comics research annotation and narrative analysis cognitive processing and reception studies This volume opens up new perspectives for the study of visual narrative making it a key reference for anyone interested in the scientific study of art and literature as well as the digital humanities

Geoinformation from the Past Hendrik Herold, 2017-12-21 Hendrik Herold explores potentials and hindrances of using retrospective geoinformation for monitoring communicating modeling and eventually understanding the complex and gradually evolving processes of land cover and land use change Based on a comprehensive review of literature available data sets and suggested algorithms the author proposes approaches for the two major challenges To address the diversity of geographical entity representations over space and time image segmentation is considered a global non linear optimization problem which is solved by applying a metaheuristic algorithm To address the uncertainty inherent to both the data source itself as well as its utilization for change detection a probabilistic model is developed Experimental results demonstrate the capabilities of the methodology e g for geospatial data science and earth system modeling
