**Industrial Applications of Green Solvents** Inamuddin, 2019-08-20 The book explores industrial applications of green solvents in industrially important areas such as oil extraction sensors and biosensors CO<sub>2</sub> capture lignocellulosic biomass utilization bio based chemicals and their application in catalysis electrochemical devices purification of pharmaceuticals organic synthesis and transformations bio lubricant additives aluminum and aluminum alloy production The solvents covered include water ionic liquids supercritical carbon dioxide and glycerol Third Generation Ionic Liquids: Synthesis to Applications Ravi Tomar, Vivek Mishra, 2025-09-23 Third Generation Ionic Liquids Synthesis to Applications is an enquiry into the evolution functional design and multidisciplinary applications of next generation ionic liquids The book focuses on third generation ionic liquids exploring themes such as novel synthesis routes structure property relationships tunability and integration into industrial and pharmaceutical systems It spans major topic areas including supported ionic liquid phases SILPs catalysis green solvents electrochemical systems and biomedical interfaces By bridging fundamental chemistry with real world applications the volume supports innovation in green chemistry energy systems and advanced materials Key features Illustrates synthesis pathways and functionalization techniques Explains structure performance correlations Demonstrates applications in catalysis electrochemistry and CO capture Highlights environmental toxicological and regulatory aspects Includes expert contributions and interdisciplinary case studies *Ionic Liquids: Properties and Applications* Francesca D'Anna, Jason Harper, 2019-10-17 Sustainability defined as the way to meet the needs of the present generation without compromising the ability of future ones to meet their own is one of the main challenges of modern society Within this context chemistry plays a significant role and solvent nature as well as its environmental impact are pivotal issues frequently addressed Ionic liquids i.e organic salts that have melting temperatures lower than 100 °C have been frequently hailed as alternatives to conventional organic solvents Their greenness has been mainly ascribed to their low vapor pressure and flammability However in addition to this their high solubilizing ability and low miscibility with conventional organic solvents frequently allow for reducing the amount used as well as for their recycling Ionic liquids especially the ones featured by aromatic cations are frequently described as polymeric supramolecular fluids constructed through the establishment of feeble but cooperative supramolecular interactions like Coulomb and interactions as well as hydrogen bonds In general ionic liquids are also indicated as designer solvents as it is possible to tailor their features to specific applications by simply modifying their cation or anion structure In this way small changes in the ion's structure can give rise to solvents showing

very different properties The above premises widely justify the growing interest in the properties and applications of ionic liquids seen in recent literature according to Scopus more than 27 000 papers published in the last five years have ionic liquids as a keyword Thanks to their properties they have been variously used as solvent media solvents for the obtainment of gel phases components in the building of dye sensitized solar cells media for the preparation of thermochromic materials etc This Research Topic aims to present how structural features can determine not only the properties of ionic liquids but also their possible employment In this latter case the interest arises from their ability to affect the outcome of a given reaction in terms of rate yield and nature of the products obtained for general use in the field of materials chemistry This article collection is dedicated to Prof Kenneth R Seddon for his outstanding contribution to the formation and development of the ionic liquids community

*Ionic Liquids for Organic Synthesis* Ravi Tomar, 2025-04-09 Medicinal Plants of Pilibhit Tiger Reserve PTR India explores the reserve s extensive biodiversity focusing specifically on its rich array of medicinal flora It serves as an invaluable resource detailing various plant species and their traditional uses alongside their potential applications in modern medicine This comprehensive work aims to bridge traditional wisdom with scientific research Key Features Detailed botanical descriptions and ecological roles of identified medicinal plants Insights into traditional knowledge and cultural significance associated with these plants Discussions on conservation challenges and strategies for preserving biodiversity Exploration of these plants roles in sustainable healthcare and local economies

**Applications of Nanotechnology for Green Synthesis** Inamuddin, Abdullah M.
